TA

Trinix Admiso

User Manual: Centralised Admission Management System

For admission staff, committee members, faculty (panel members) and system administrators
Version 0.8 · November 2026

One application for every campus, course and round. Trinix Admiso brings shortlisted applicants in from the admission portal and manages everything after that: document scrutiny, eligibility, GD/PI scheduling and live marking, and merit lists.

Applicants never sign in. Staff record every response, and the system sends all notices to applicants by email.

The screens in this manual show sample data from a test system. Names, numbers and marks in them are not real, and the formulas and cut-offs shown are test values, not IIFT's rules.

Contents

1. Introduction
What the system does, who uses it, the admission workflow

2. Getting started
Signing in, two-factor sign-in, the screen layout, your account

3. Setup
Institution, campuses, locations, courses, cycles and rounds

4. People
Users, importing faculty, roles and permissions, teams

5. Applicants and imports
Sources, importing portal files, applications

6. Documents, scrutiny and eligibility
Document setup, checking files, scrutiny checklists, deficiency emails, eligibility decisions

7. Selection (GD/PI)
Stages and marks, call lists, panels, automatic allocation, contact log

8. Marking interviews (for panel members)
My interviews on a phone or tablet, submitting, locking results

9. Merit
Merit formula, running, approving and publishing merit lists, exports

10. Seats and offers
Categories, reservation rules, seats, allocation, offers, payments, waitlist, moving up

11. Admission and accounts
Fee structure, refund policy, confirming admissions, fees and payments, withdrawals and refunds, bank statements, reports

12. System administration
Installation, updates, health, settings, audit log

13. Roles at a glance
Who can do what

14. Questions and troubleshooting
Common questions, terms used

CHAPTER 1

Introduction

Trinix Admiso is the admission office's system for everything that happens **after** applicants apply on the institute's admission portal. It is one installation and one database for all campuses (Delhi, Kolkata, Kakinada, GIFT City) and all courses (MBA (IB), MBA (BA), IPM and others).

The admission workflow

1. **Setup:** the institution, campuses, courses, which campus offers which course, the admission cycle with seats, and the rounds with dates for each campus.
2. **Import:** the shortlisted applicants of a round are imported from the portal's Excel/CSV export (or sent by the portal through its API), checked, previewed and approved by a second person.
3. **Documents and scrutiny:** documents arrive as a ZIP file or as links. Staff verify each one, work through the course's checklist, email applicants about anything missing, and decide eligibility.
4. **Call lists:** IIFT's cut-offs, set for each category, decide who is called for GD/PI. A second person publishes the list, and called applicants are emailed.
5. **GD/PI:** panels are created in many cities or online, faculty and candidates are assigned (automatically, with changes by hand), and schedules and reminders are emailed.
6. **Live marking:** panel members mark on their phones or tablets. Marks save automatically, results are combined by the stage's formula and then locked, and GD candidates are sent on to PI panels.
7. **Merit:** the merit formula turns each candidate's data into a total and a rank. A second person approves and publishes the list, which can be exported to Excel or PDF.

> Seat allocation with reservation, offers and waitlists, fees and refunds are later phases. They are not in this version.

Principles you will notice

- **Nothing is saved without a check.** Imports, call lists, automatic allocations and merit lists are always shown as a preview first.
- **Two people for important steps.** The person who uploads an import, runs a call list or runs a merit list cannot approve or publish it.
- **Everything is recorded.** Every change is written to the audit log with who, when, what changed and why.
- **Rules are entered by the institute.** Eligibility rules, cut-offs, marking criteria and the merit formula are never built into the software; authorised staff enter them and approve them with a source.
- **You see only your scope.** Each person sees only the campuses, courses and cycles their role covers. Panel members see only their own candidates.

- **Email only.** All notices to applicants go by email; there is no SMS. Applicants reply by phone or email, and staff record the reply.

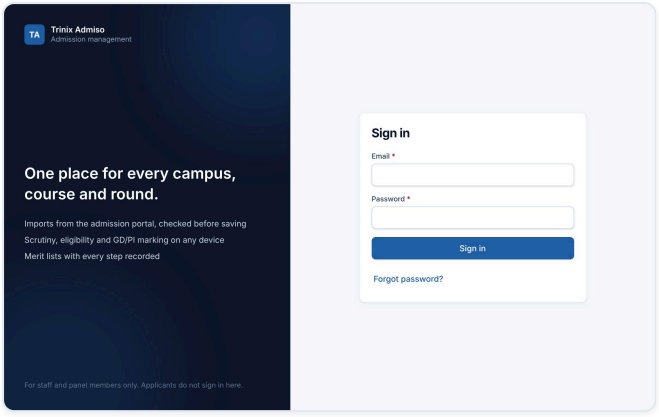

CHAPTER 2

Getting started

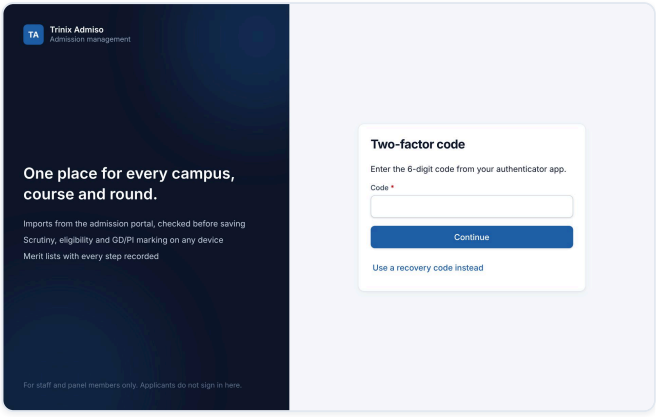

Your account

You receive an **invitation email** from the system. Open the link, choose a password (at least 12 characters), and sign in with your email address and that password. Invitations expire after a few days; if yours has expired, ask your administrator to resend it.

Signing in

The sign-in page

The two-factor code step

Two-factor sign-in

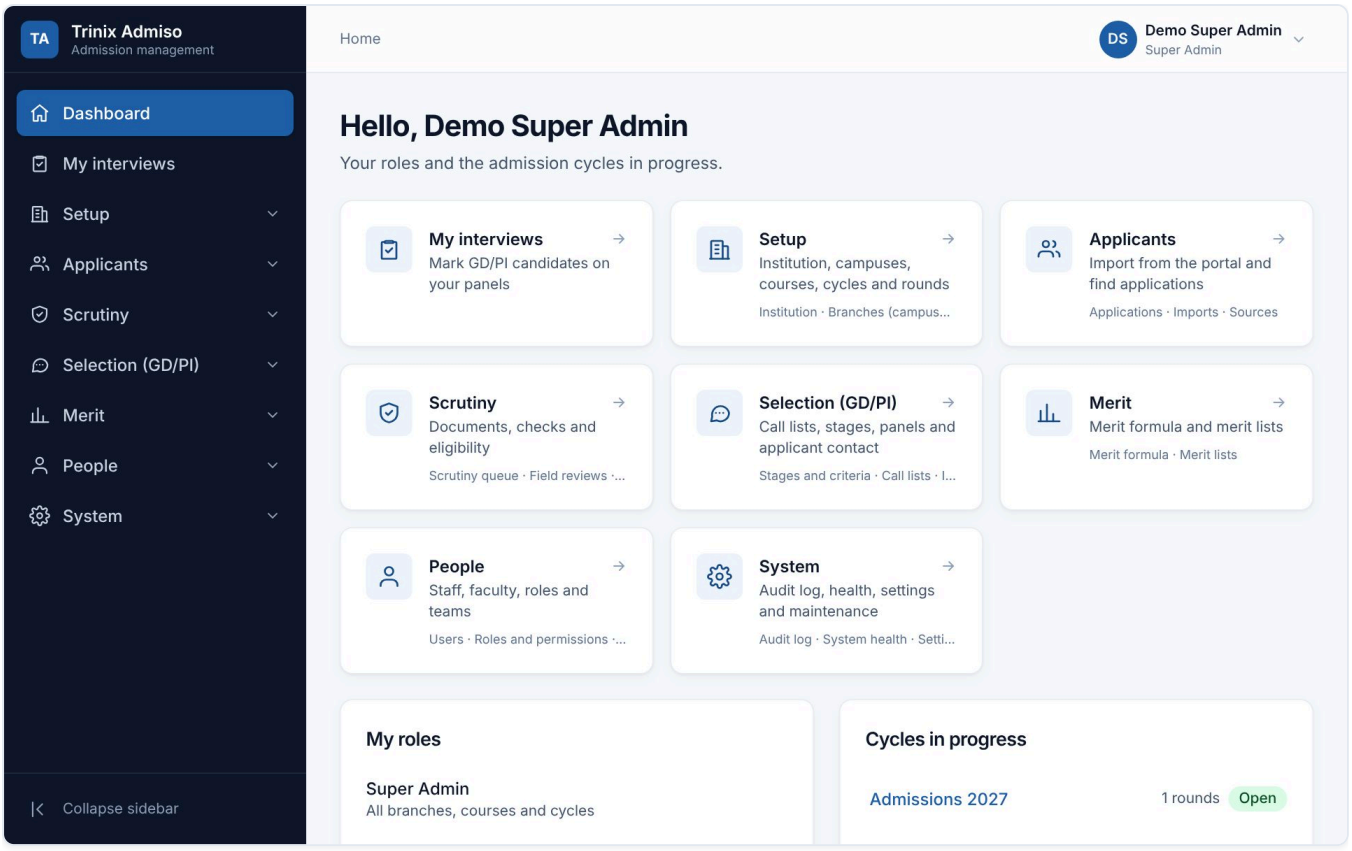

Administrators (Super Admin, IT Administrator, Central Admission Administrator, Branch Administrator, Accounts Officer) must use **two-factor sign-in**. At your first sign-in you are taken to **Account** to set it up:

1. Install an authenticator app on your phone (for example Google Authenticator or Microsoft Authenticator).
2. Click **Set up two-factor**, confirm your password, and scan the QR code with the app.
3. Type the 6-digit code the app shows, click **Turn on**, and **save the recovery codes** somewhere safe. Each one lets you sign in once if you lose your phone.

After that, each sign-in asks for your password and then the current 6-digit code.

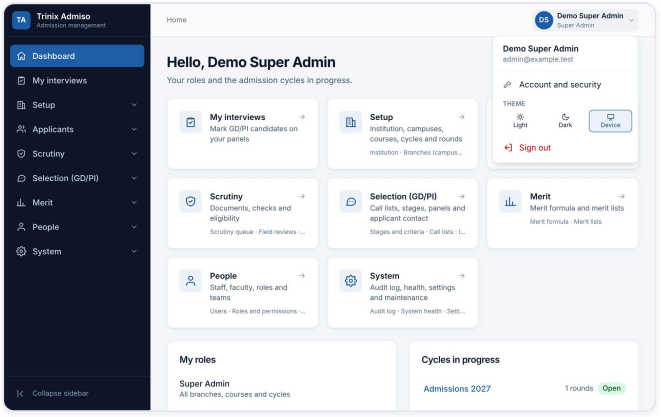

> Forgot your password? Use **Forgot password?** on the sign-in page; a reset link is emailed to you. After several wrong passwords the account locks for a short time; an IT Administrator can unlock it.

The screen layout

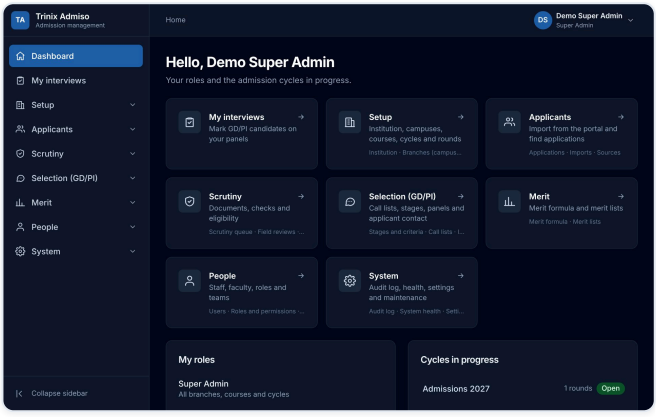

The dashboard, with the sidebar menu on the left and the top bar

- **Sidebar menu (left):** the modules in the order of the admission work. Click a group (for example **Selection (GD/PI)**) to open its sub-menu; the page you are on is highlighted. You see only the items your role allows.
- **Collapse sidebar:** at the bottom of the sidebar on a computer, this shows icons only to give more room. Click any icon to open the menu again.
- **Top bar:** shows where you are (for example *Home › Selection (GD/PI) › Interview panels*). Click a part of the path to go back to it.
- **Your name (top right):** opens the account menu, with Account and security, the **theme** (Light, Dark or Device, which follows your phone or computer) and **Sign out**.
- **Dashboard:** shortcut cards for each module you can use, your roles, and the admission cycles in progress.

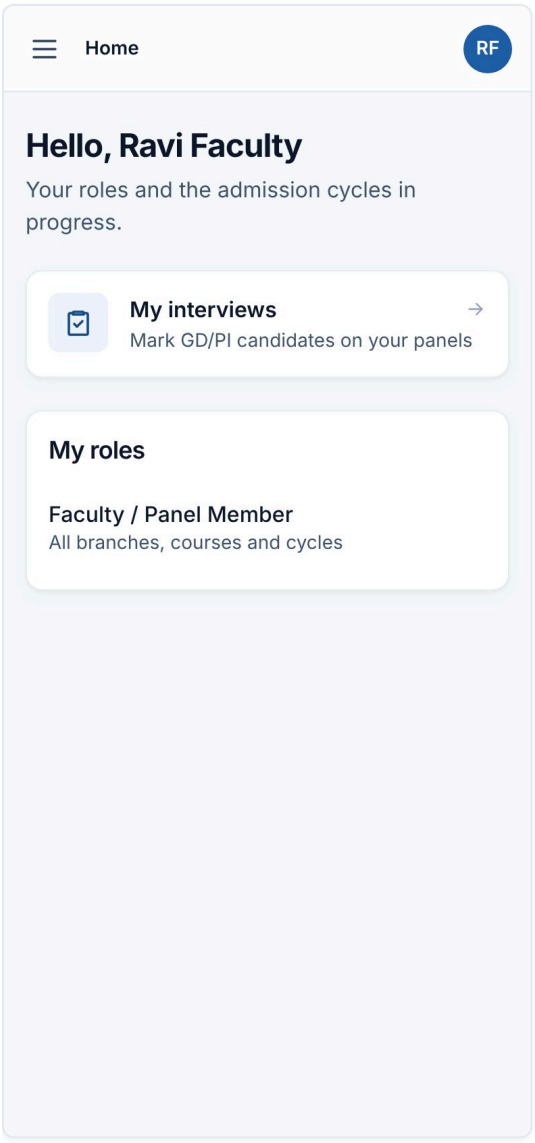

The account menu with the theme switch

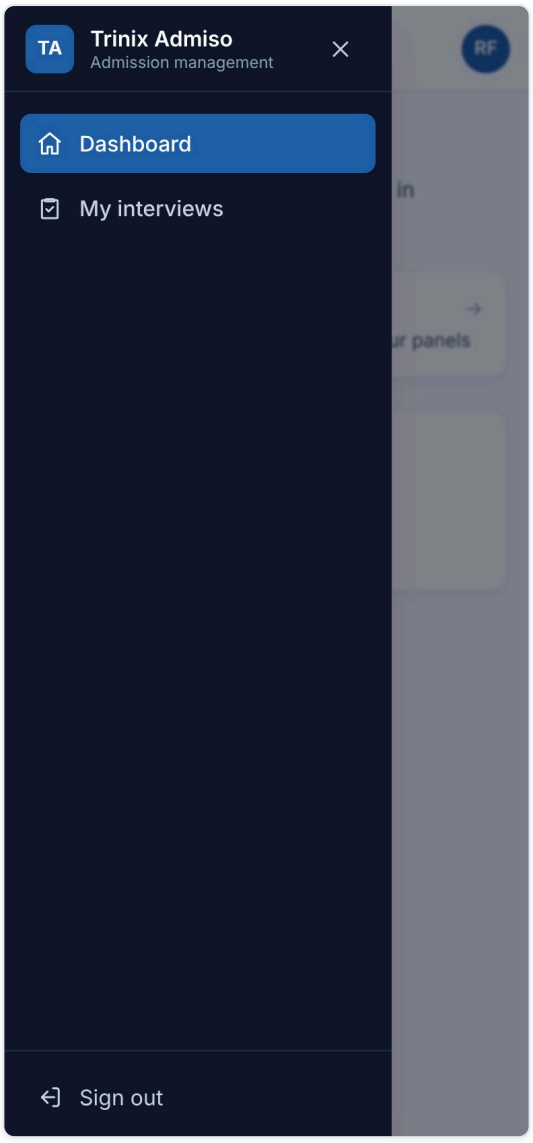

The dark theme

On a phone or tablet

Everything works on a phone. Tap the **menu button** (three lines, top left) to open the menu; tap outside it or the × to close it. Tables can be swiped sideways.

Dashboard on a phone

The menu on a phone

Account and security

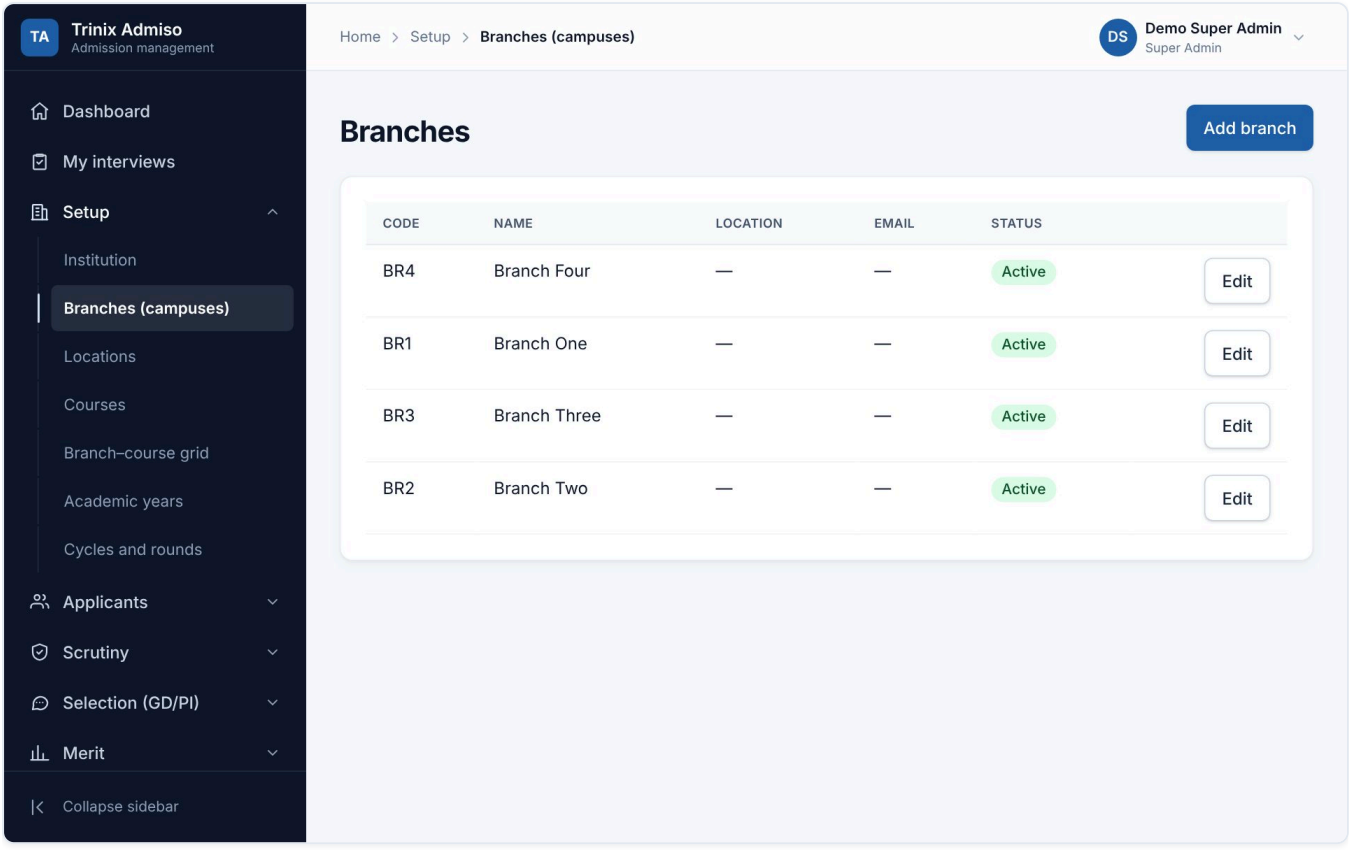

Account shows your roles and lets you change your password, turn two-factor sign-in on or off (where your role allows it), and see new recovery codes. You are signed out automatically after a period of inactivity.

Setup

Setup is done once, by a Super Admin or Central Admission Administrator, and updated each year. Do it in this order.

Institution, branches (campuses) and locations

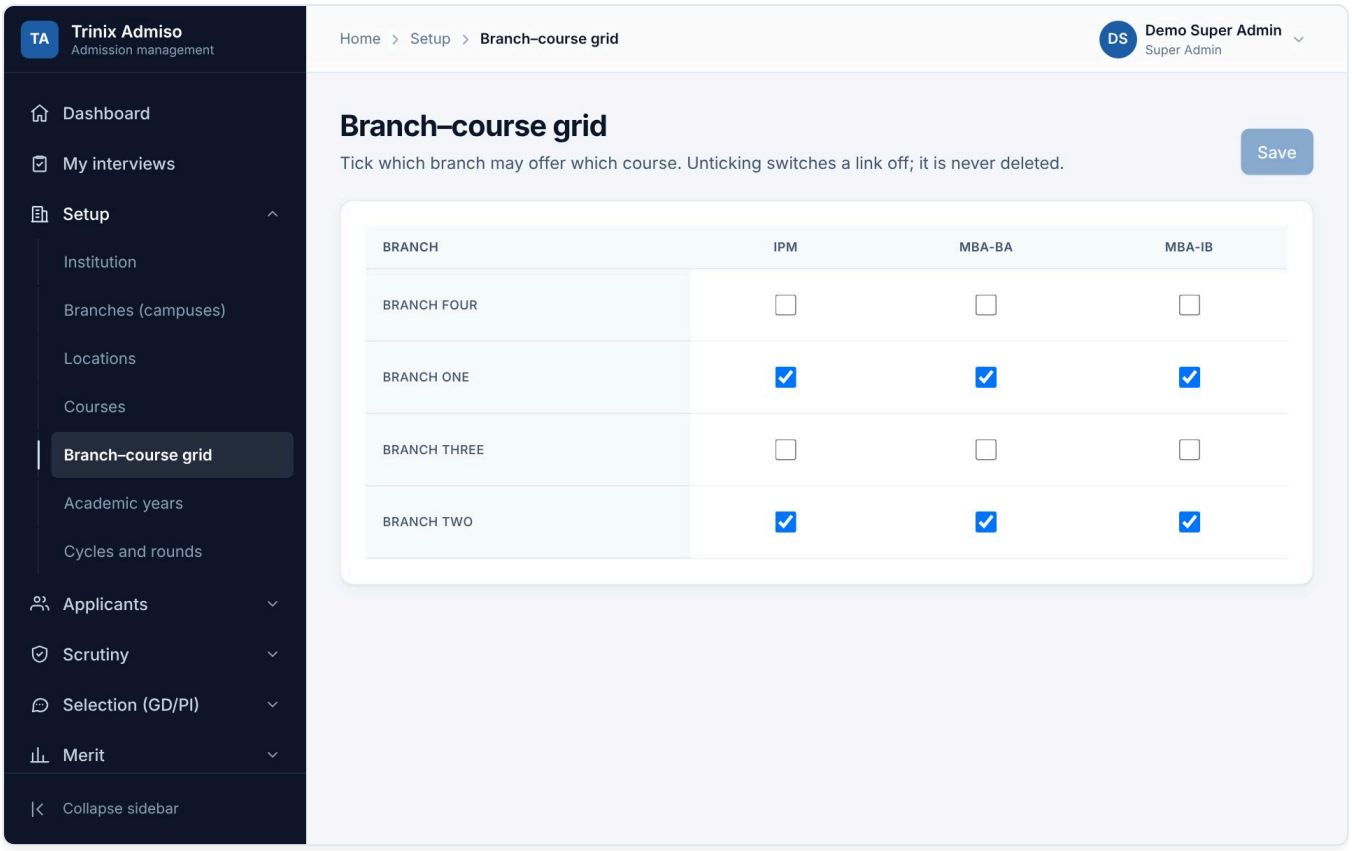

- **Institution**: the institute's name and details, used in emails.
- **Branches (campuses)**: one record per campus, e.g. Delhi, Kolkata, Kakinada, GIFT City. The **code** (e.g. DEL, KOL) is what portal files use for campus preferences, so choose it carefully. It cannot change once in use.
- **Locations**: addresses where things happen, for example campuses and interview centres in other cities. GD/PI panels are held at a location (or online).

Branches (campuses)

Courses and the branch–course grid

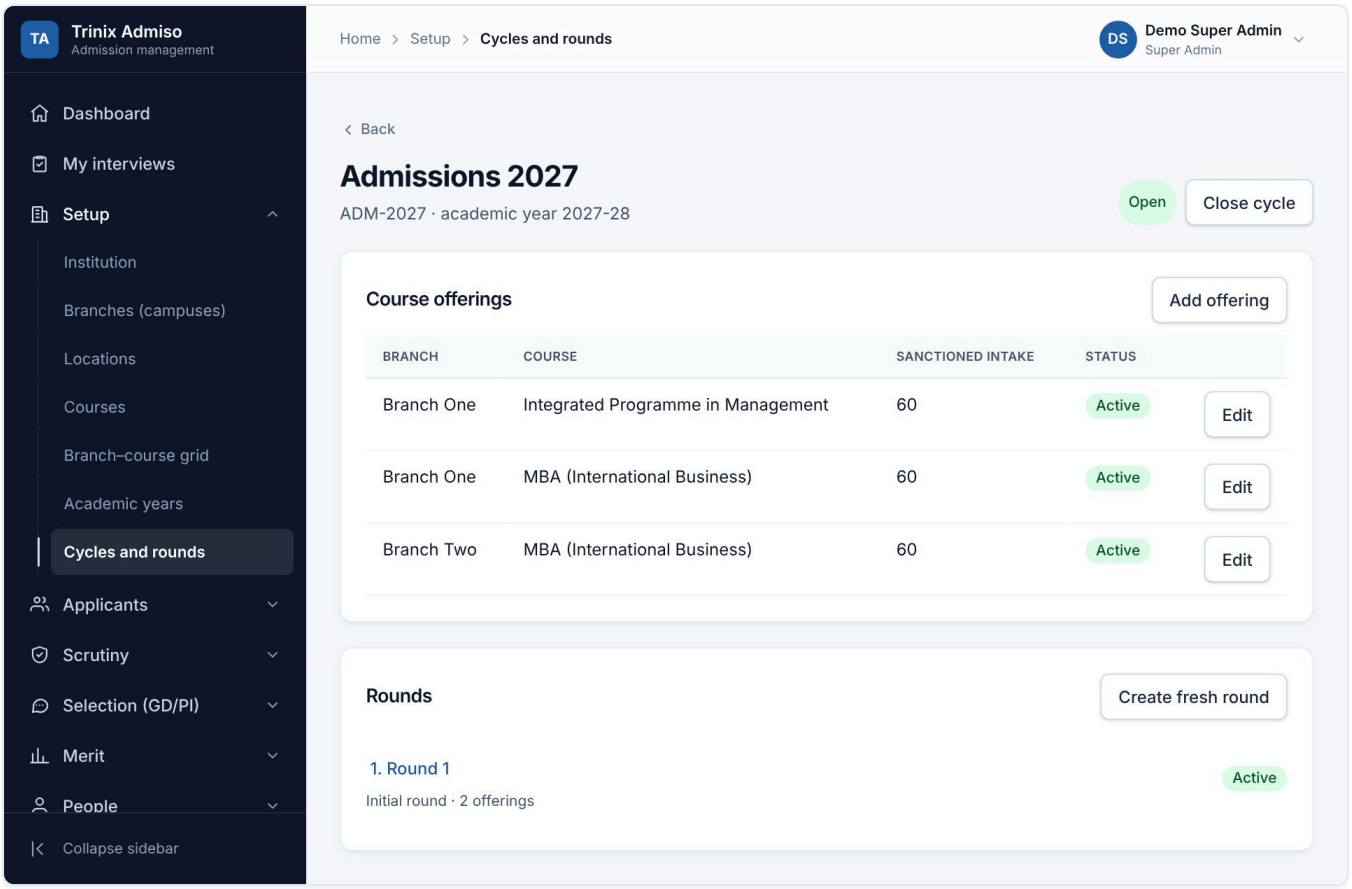

Courses lists each programme (e.g. MBA-IB, MBA-BA, IPM) with its level, duration and entrance exam (CAT or IPMAT). The **Branch–course grid** says which campus offers which course: tick the boxes and save.

Which campus offers which course

Academic years and admission cycles

1. **Academic years**: add the year, e.g. **2027-28** with its start and end dates.
2. **Cycles and rounds** → **Add cycle**: the admission cycle for that year, e.g. *Admissions 2027*.
3. Open the cycle and use **Add offering** for each campus and course it admits to, with the **sanctioned intake (seats)**, e.g. MBA (IB) Delhi 240.
4. Click **Open cycle** when it is ready.

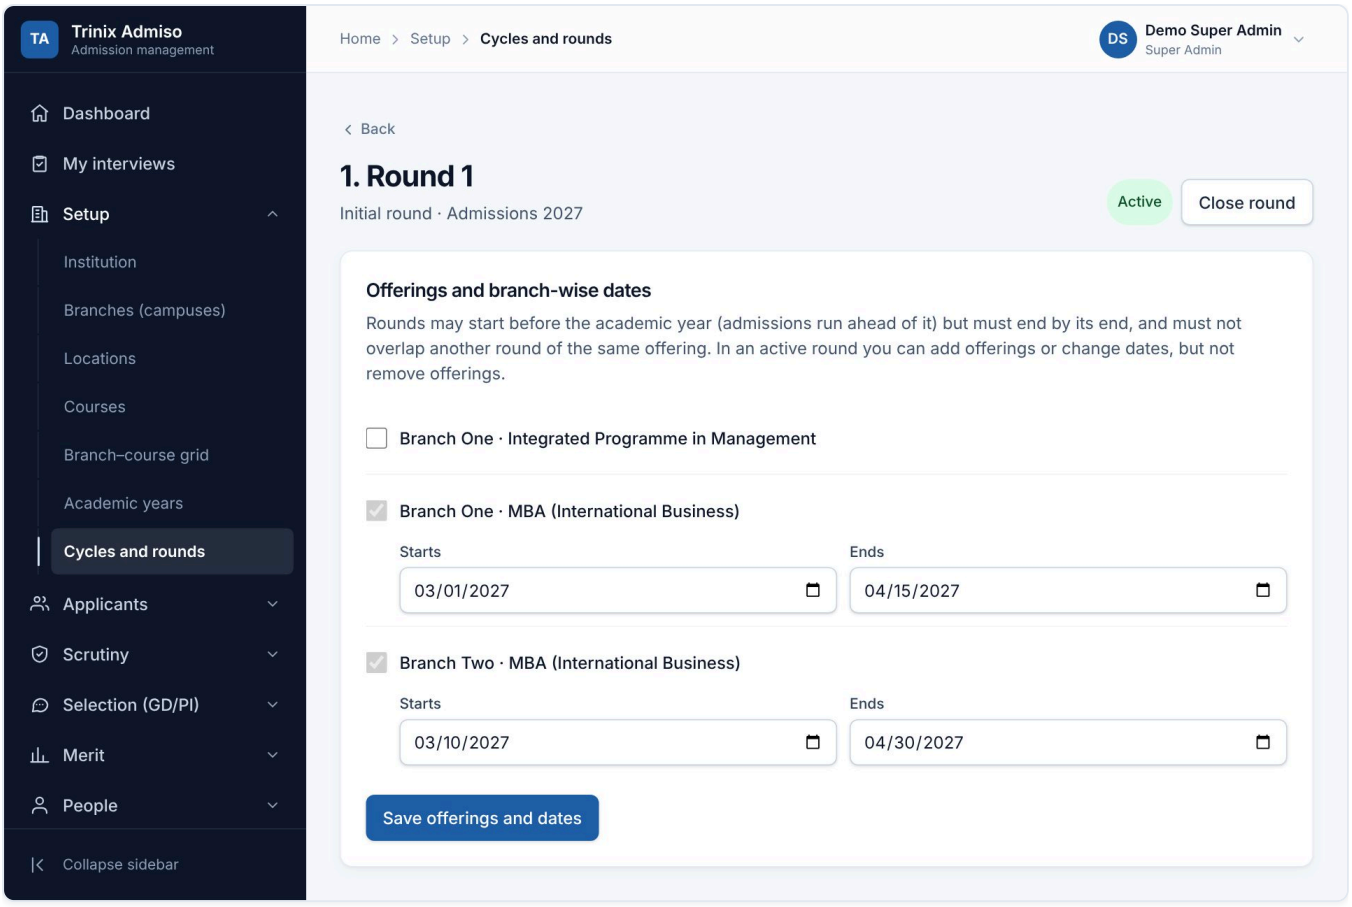

A cycle with its offerings (seats) and rounds

Rounds and campus-wise dates

Applicants are imported **round by round** (Round 1, Round 2, ...). In the cycle, click **Create first round** (later: **Add round**), then on the round page:

1. Tick each campus and course in the round and give its **start and end dates**. Dates can differ by campus.
2. Click **Save offerings and dates**, then **Activate**.
3. When the round is over, click **Close round** and give a reason. A closed round is read-only; **Reopen** needs a reason and is recorded.

> Rounds may **start before** the academic year, because admissions run ahead of it (e.g. from December 2026 for 2027-28), but must **end by** the year's end. Two rounds of the same campus and course cannot overlap.

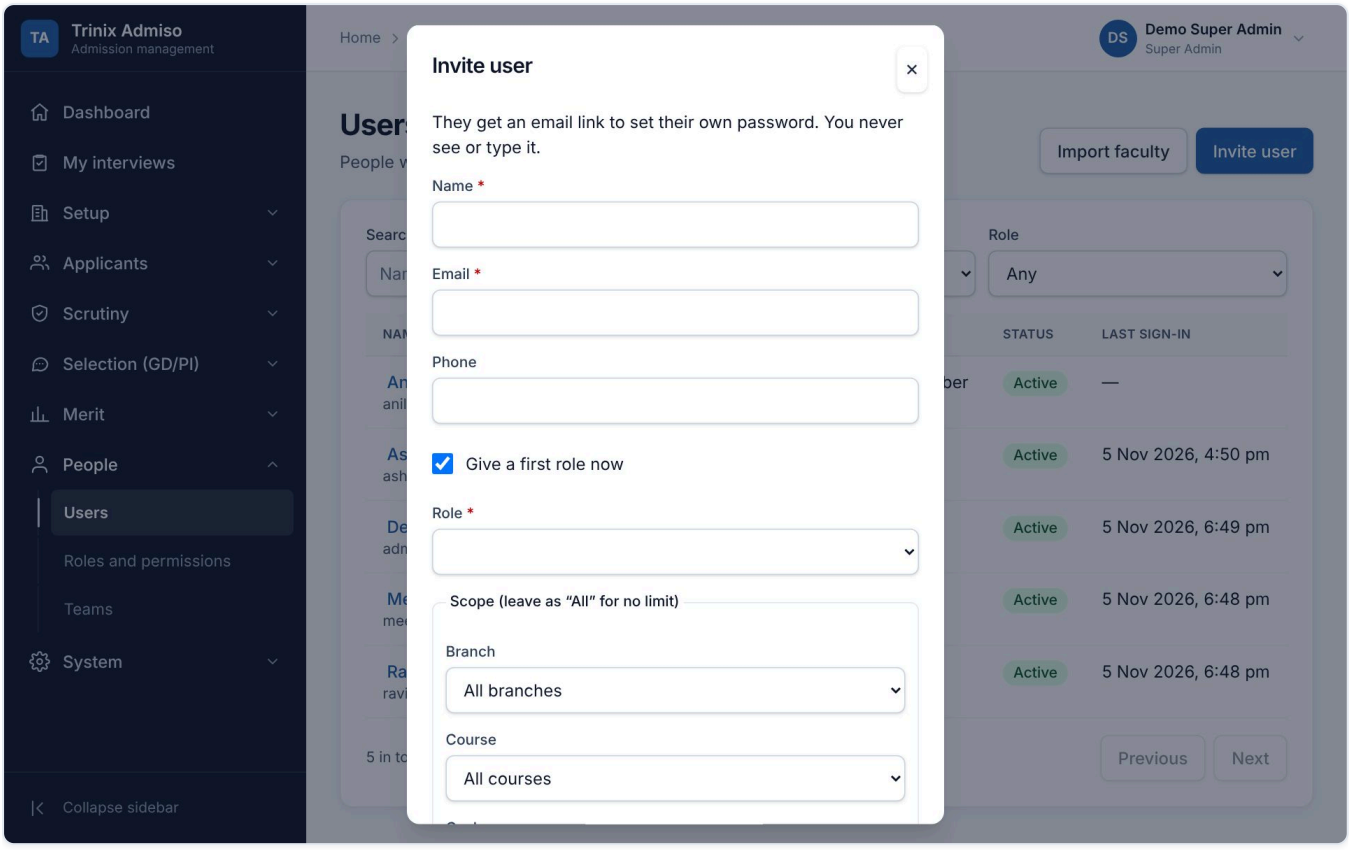

Campus-wise dates of a round

People

Users and invitations

Users lists everyone who can sign in. **Invite user** creates an account and emails an invitation. Give each person a **role** and, if needed, a **scope**: a campus, a course and/or a cycle. Leave a box empty for "all".

Inviting a user with a role and scope

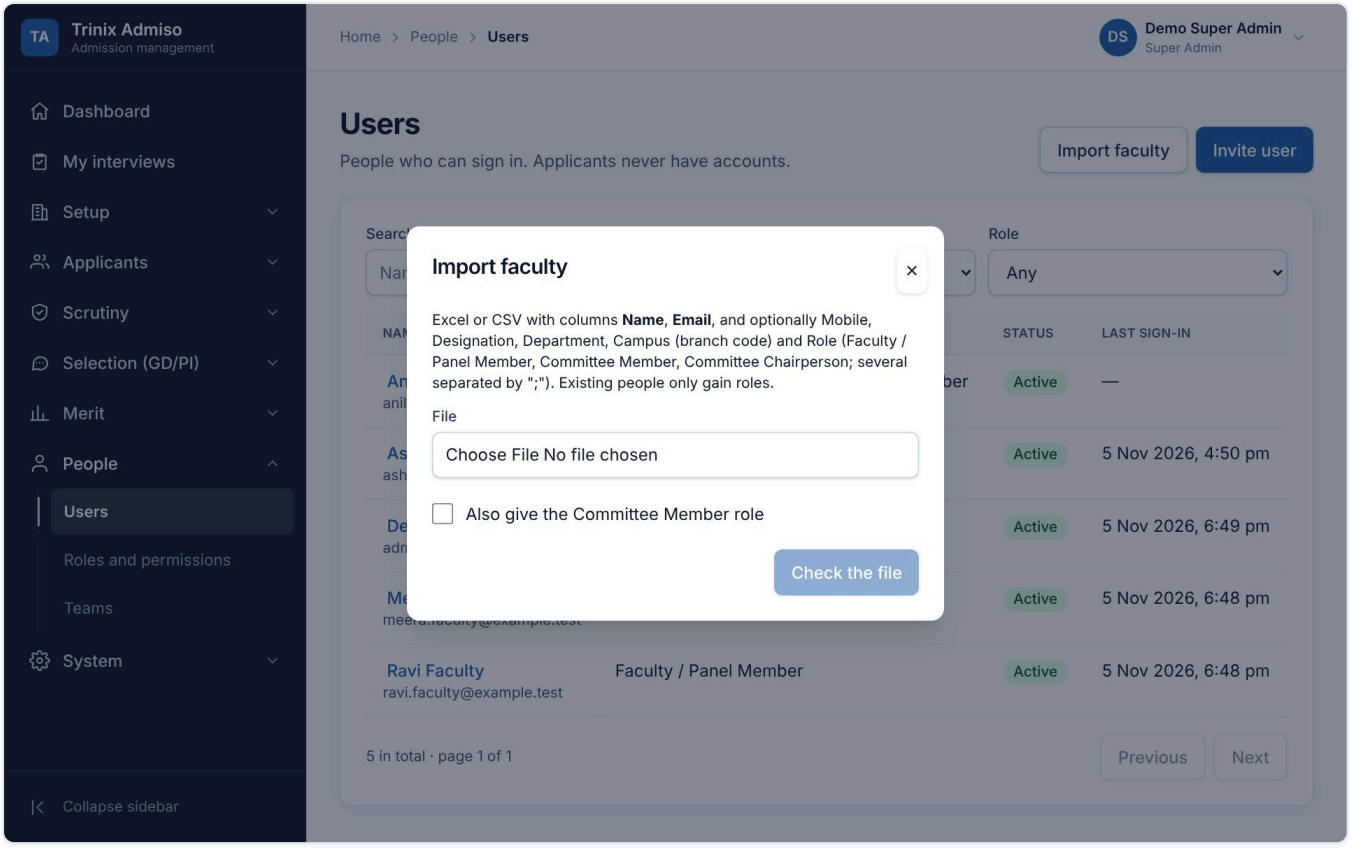

- A person can hold several roles. Open the user and use **Add role**.
- Roles are removed (revoked) with a reason; the history is kept.
- Nobody can give a role or scope wider than their own, or change their own roles.
- **Suspend** stops someone signing in, with a reason; **Reactivate** restores access.

Importing faculty and panel members

To add many faculty at once, use **Users** → **Import faculty**:

1. Prepare an Excel or CSV file with the columns **Name** and **Email**, and optionally **Mobile**, **Designation**, **Department**, **Campus** (branch code, e.g. DEL) and **Role**: Faculty / Panel Member, Committee Member or Committee Chairperson, with several separated by ";".
2. Choose the file. Tick **Also give the Committee Member role** if panel members are also committee members.

3. Click **Check the file**. Each row shows whether the person is new, existing (gets the roles) or unchanged, or has an error such as a bad email, an unknown campus or a duplicate.
4. Click **Confirm and send invitations**. New people get an invitation email. Existing people only gain roles; nothing is ever removed.

Import faculty

Roles and permissions, teams

Roles and permissions shows what each role may do (see Chapter 13). Only the Super Admin can change a role's permissions. **Teams** holds committees, admission cells and accounts teams, with their members and history.

Applicants and imports

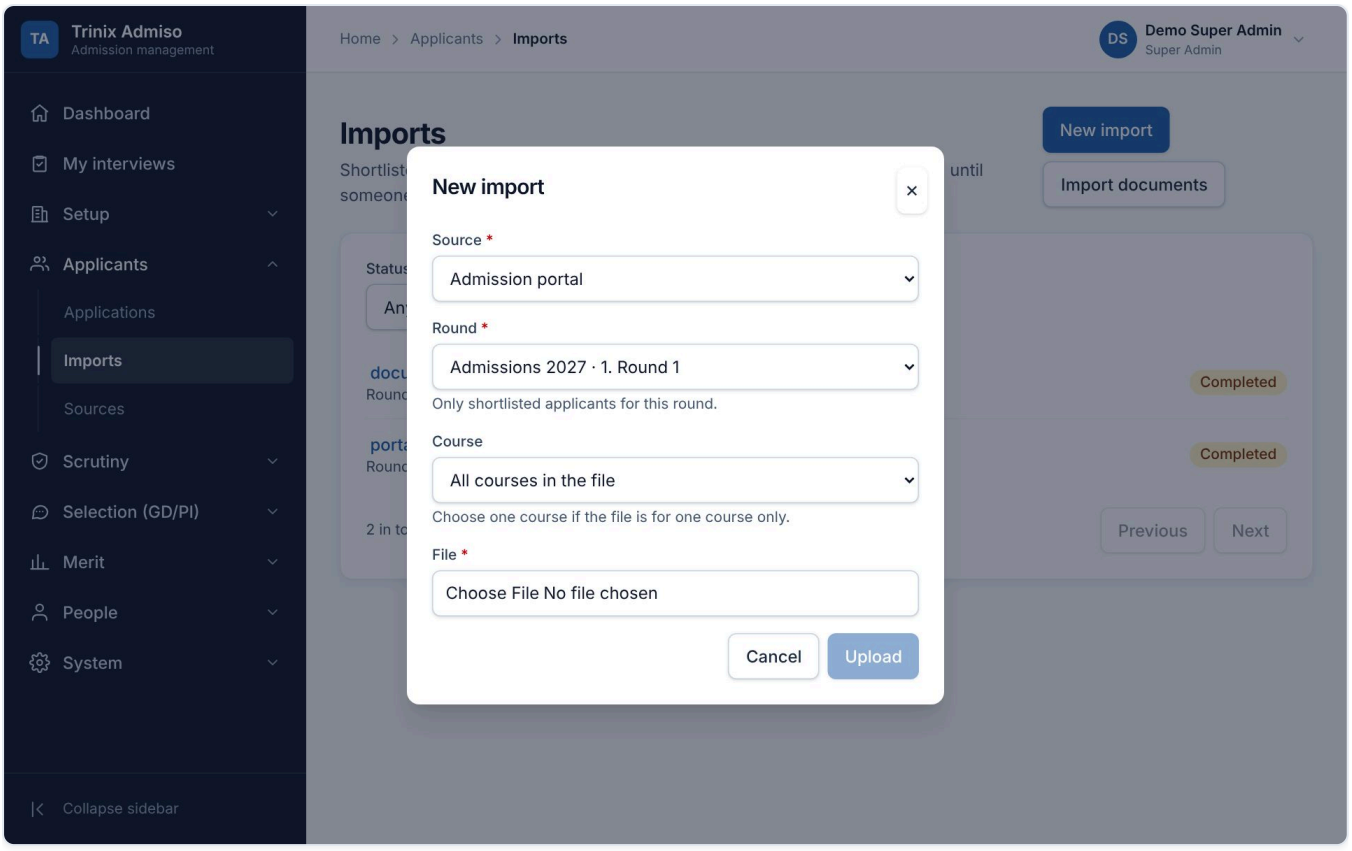

Sources

A **source** is where applicant data comes from, normally the *Admission portal*. In **Sources** (Super Admin), add the source and, if the portal will send data through the API, create a **source token**. It is shown once only; give it to the portal's technical team.

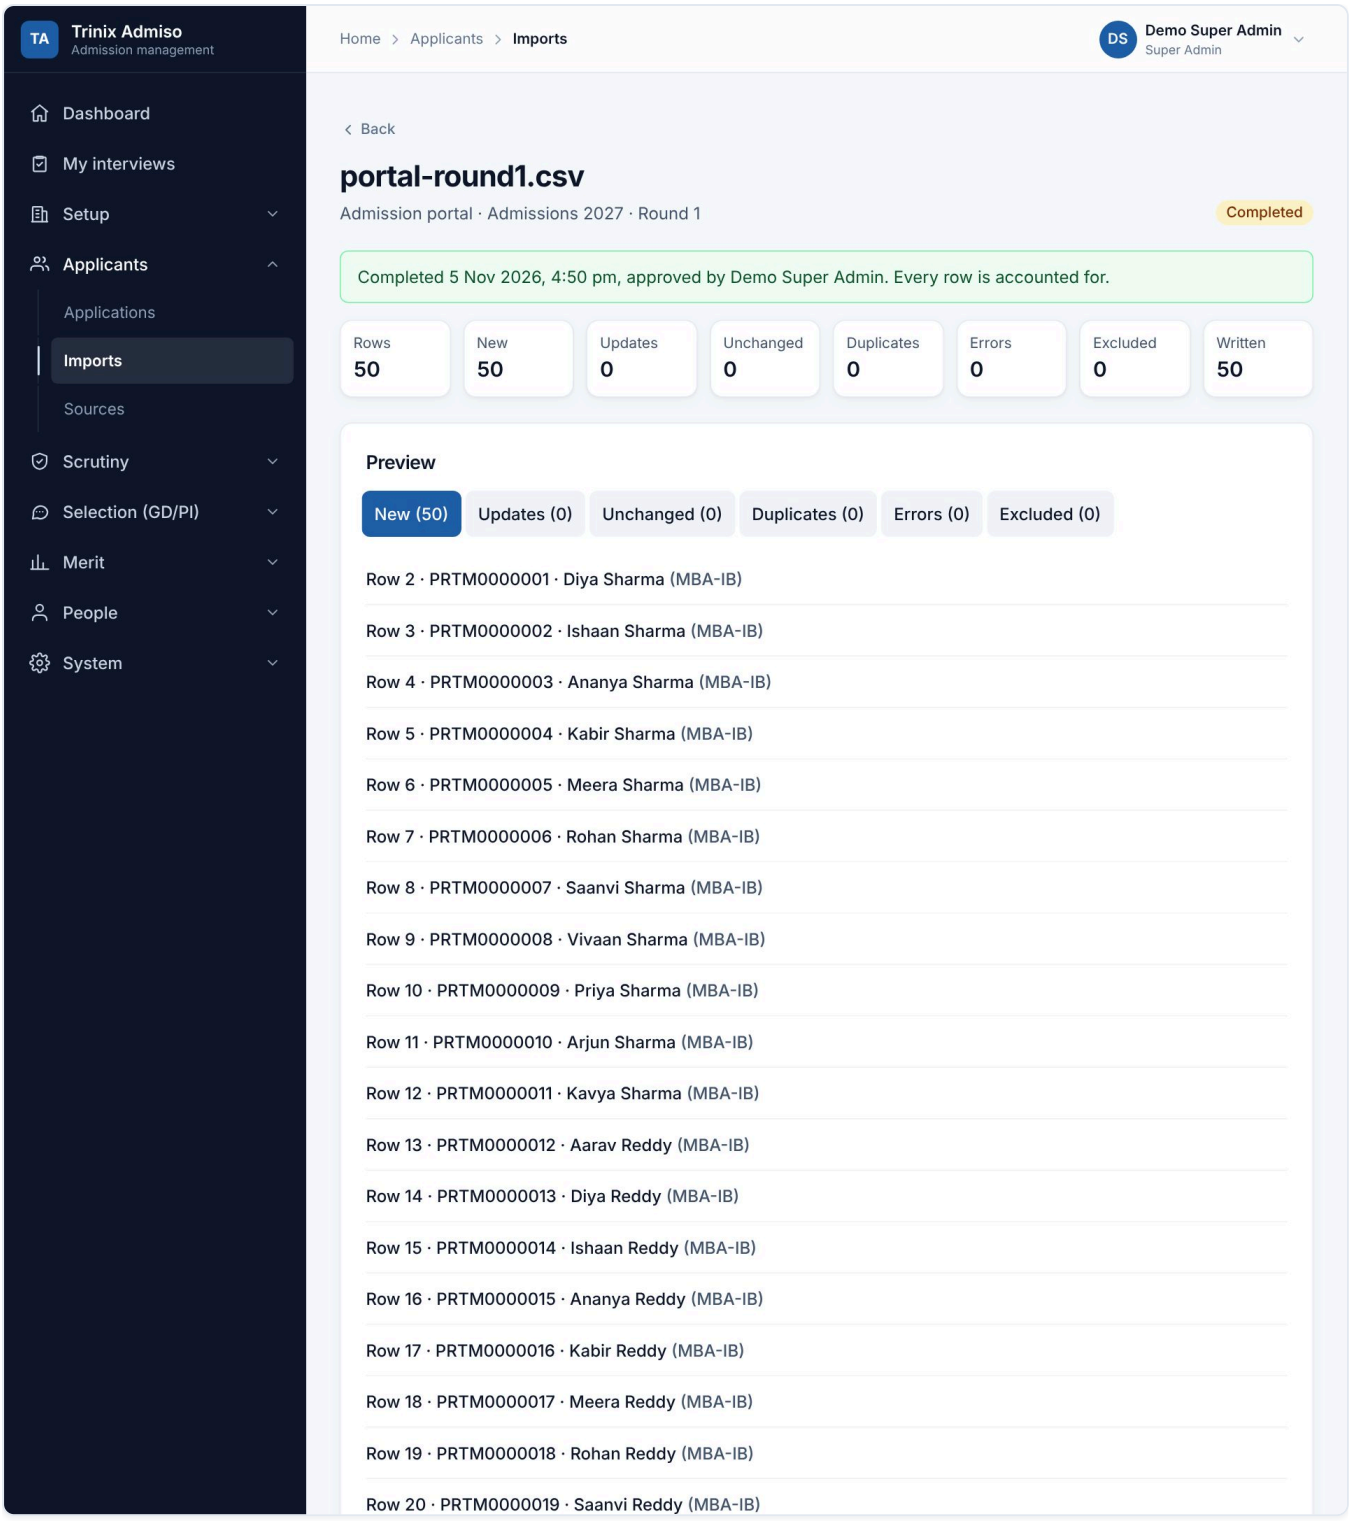

Importing a portal file

Only the **shortlisted applicants of a round** are imported. Every import goes through the same checks, and nothing reaches the applicant records until a second person approves it.

1. **Imports** → **New import**: choose the source, the **round**, the course (or "All courses in the file"), and the Excel/CSV file. Click **Upload**.
2. **Match the columns**: for each field (application number, name, CAT number, percentile, category, marks, campus preferences, GD/PI centre preferences, ...) pick the column in the file. Add **value translations** where the portal uses different words, e.g. "General" → GEN or "OBC" → OBC-NCL. **Save as template** so next time it is filled in for you.
3. Click **Check the rows**. The batch shows **New**, **Updates** (changes to applicants already imported), **Unchanged**, **Duplicates** and **Errors**, row by row. You can exclude rows, with a reason.
4. A **different person** with approval rights opens the batch and clicks **Approve and write**. The batch then says "Every row is accounted for".

Starting a new import for a round

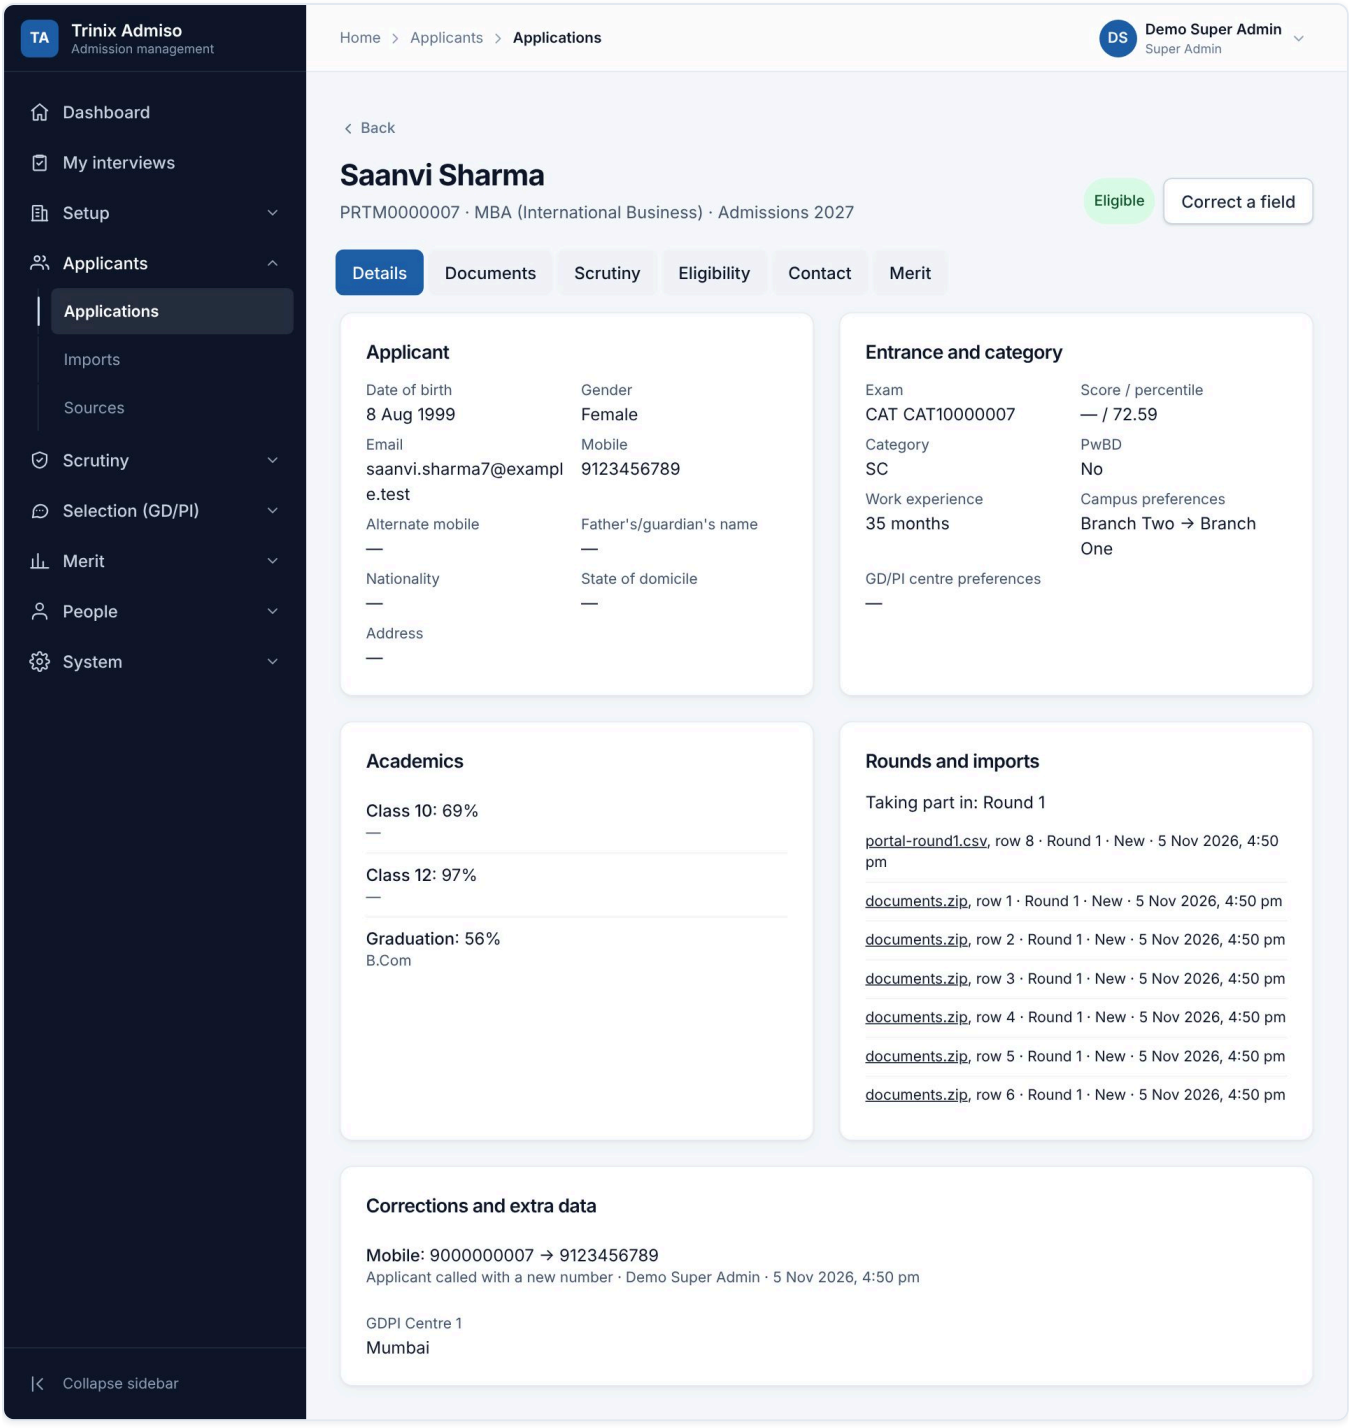

An import batch: counts and the preview of every row

> **Duplicates and updates.** An applicant is identified by *source + portal application number + course + cycle*. A later round's file adds new applicants and shows changes to existing ones as updates. Empty cells never erase stored data, and a field already verified in scrutiny is never overwritten: the change goes to **Field reviews** instead. A student who applied to two MBA courses has two application numbers and two separate records.

Applications

Applications lists applicants in your scope. Search by application number, CAT/IPMAT number or name, and filter by course, round or status. Open an application to see its tabs:

An application: details tab

Tab	What it holds
Details	Personal and contact details, entrance scores, academics, campus preferences, GD/PI centre preferences, rounds, status history, corrections
Documents	Each document type with its versions, scan status and verification (Chapter 6)
Scrutiny	The course's checklist and its progress (Chapter 6)

Eligibility	The evaluation against the approved rules, and the decision (Chapter 6)
Contact	Calls and emails with the applicant, interviews, follow-ups (Chapter 7)
Merit	The applicant's place in published merit lists (Chapter 9)

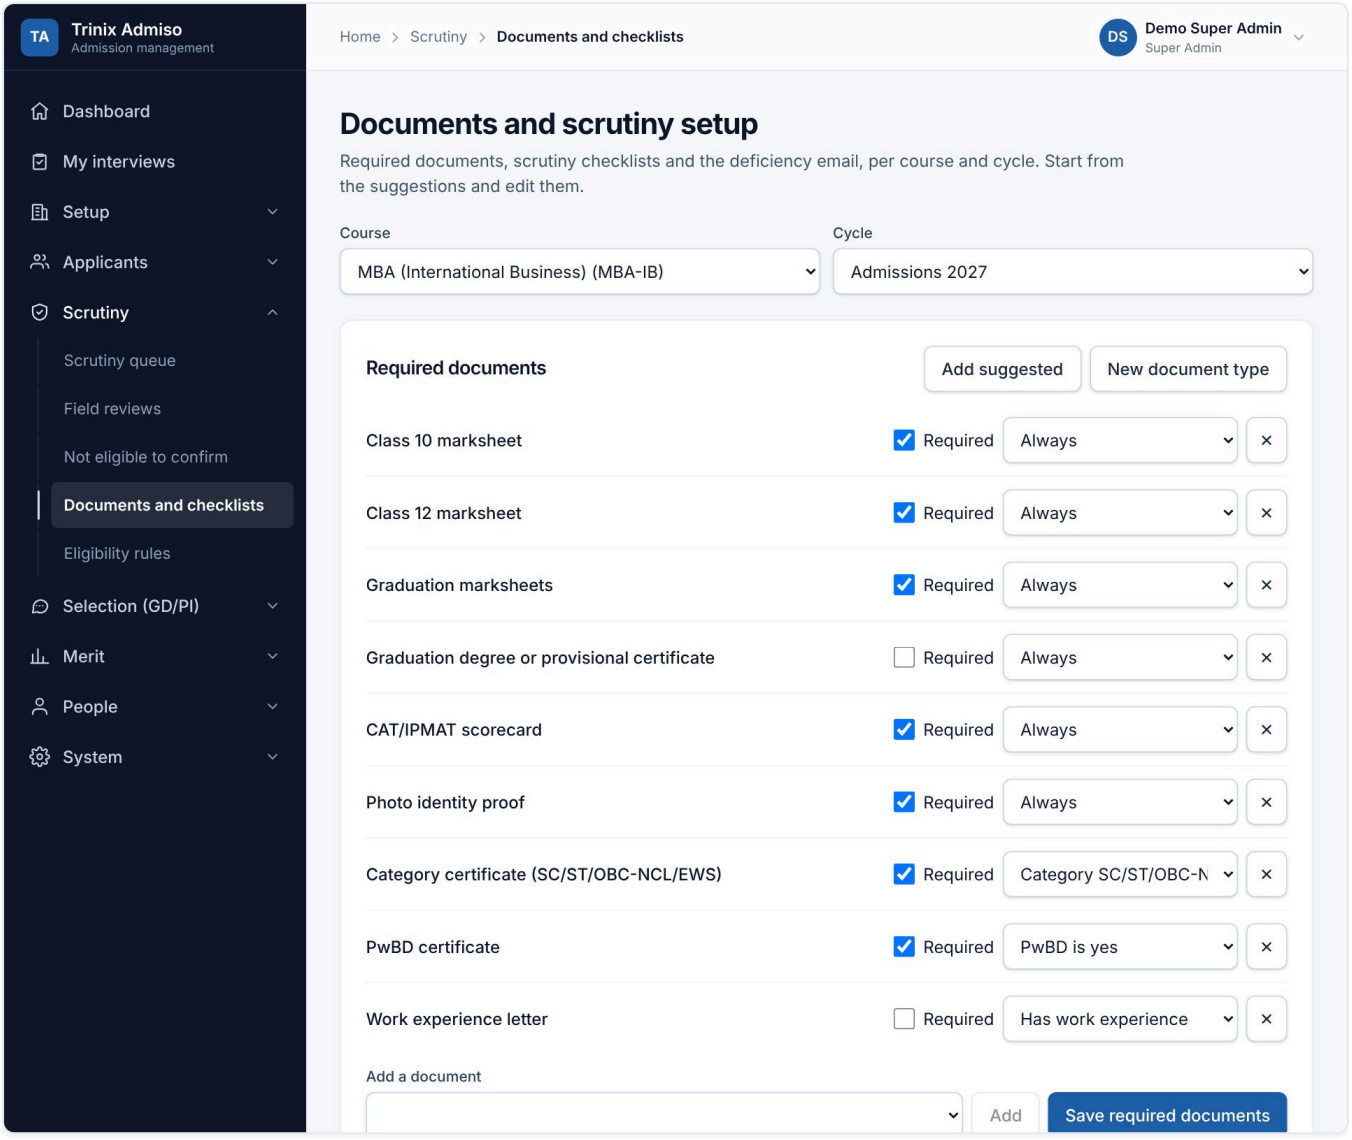

Correct a field changes a value with a **reason**; the old and new values are kept. If the same CAT number appears on another application you can see, a note shows it (the records are never merged).

Documents, scrutiny and eligibility

Setting up documents and checklists

Documents and checklists (choose the course and cycle):

- **Document types**: e.g. Class 10 and 12 marksheets, graduation marksheets, category certificate, CAT/IPMAT scorecard, photo identity. Use **Add suggested** for a starting list, then edit it.
- **Requirements**: which documents each course needs, and which are optional.
- **Scrutiny checklist**: the checks staff do for each application. These are document checks ("Class 10 marksheet verified") and field checks ("Date of birth matches the Class 10 marksheet"). Start with **New from suggestions**, edit it, then **Activate**. Changes later make a new version.

Documents and checklists for a course

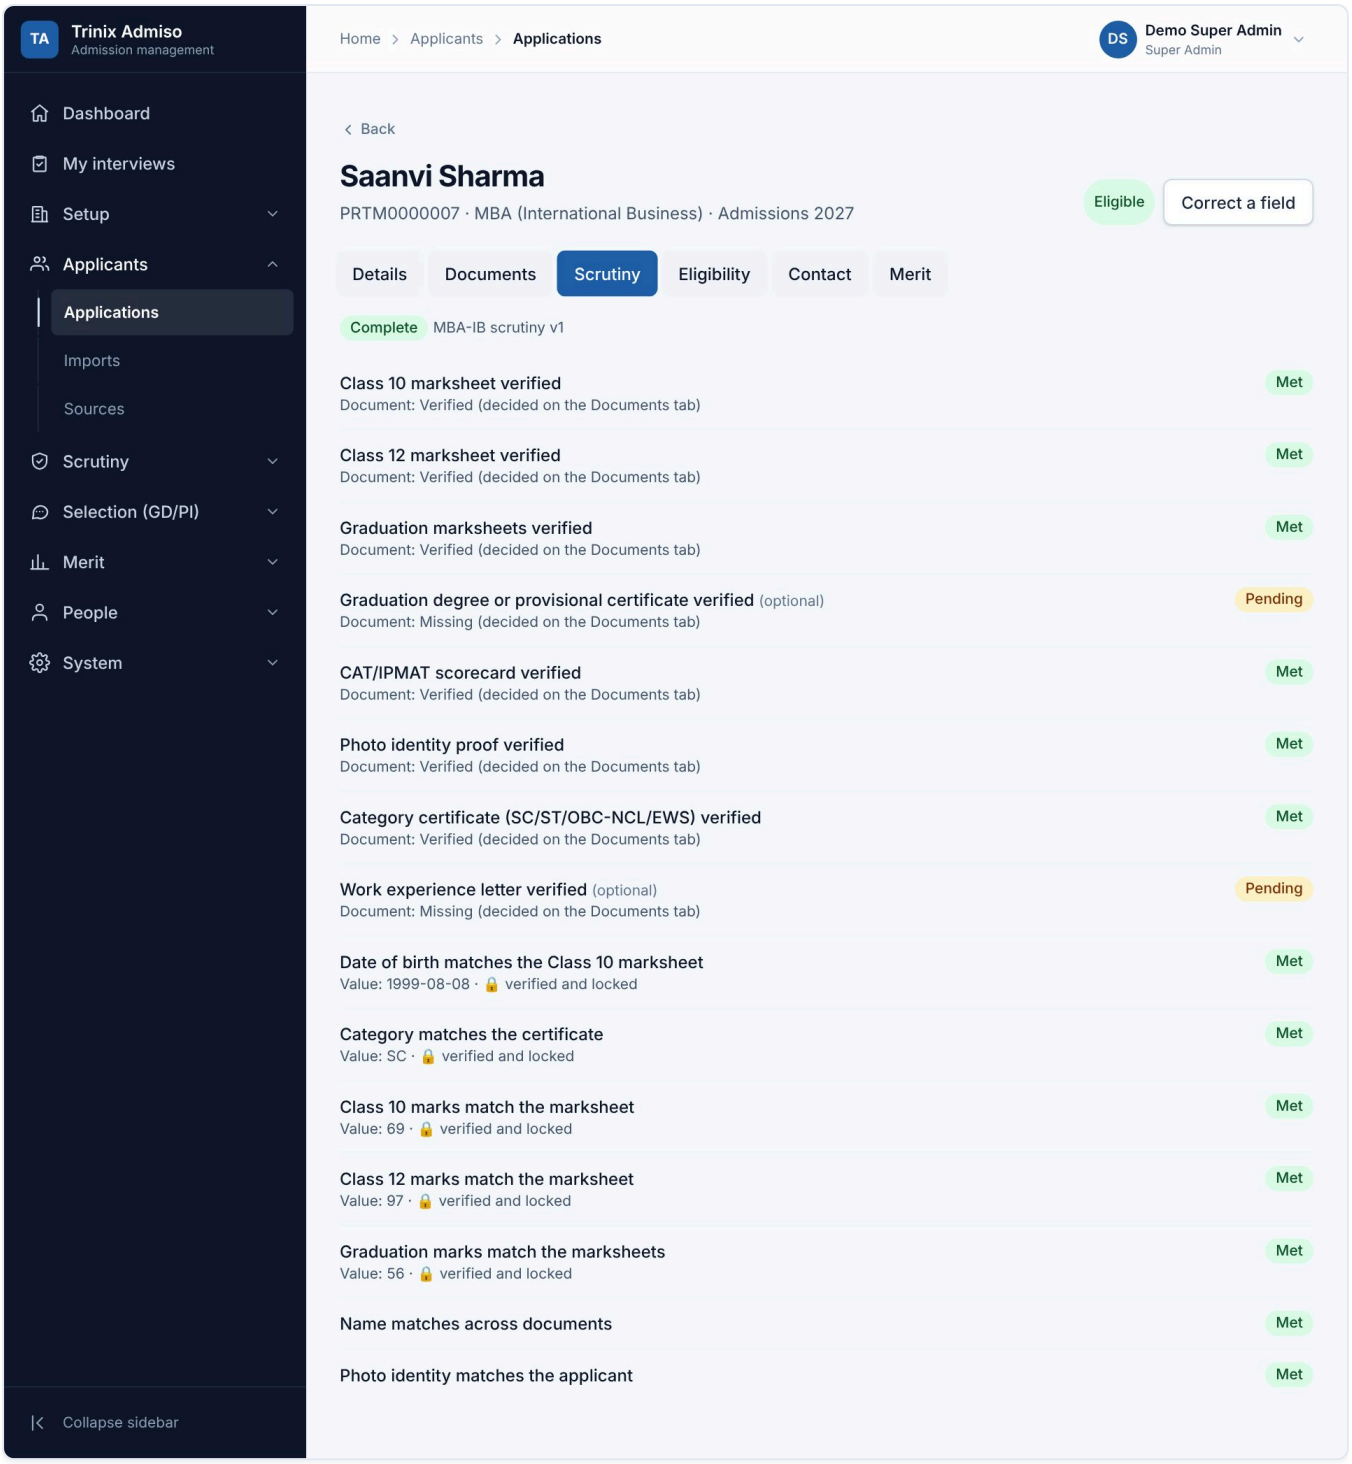

Bringing documents in

Imports → **Import documents**: upload a **ZIP file** whose files are named by application number and document, or a list of **links** from the portal. Staff can also upload a file on the application's Documents tab. Every file is checked for type and size, kept as a new version, and **virus-scanned**. A file that fails the scan is quarantined and never opened.

> Documents are private. Opening one creates a link valid for 5 minutes for you only, and every opening is recorded.

Doing scrutiny

1. Find the application in the **Scrutiny queue** (a Central Admin can assign applications to officers), or open it from **Applications**.
2. On the **Scrutiny** tab click **Start scrutiny**.
3. On the **Documents** tab, open each file and click **Verify**, or **Reject** with a reason.
4. On the **Scrutiny** tab, mark each check **Met**, **Not met** or **Not applicable**. A field check marked Met **locks** that field, so a later import cannot change it silently.
5. Click **Mark complete** when all checks are done. If something is missing, click **Mark deficient**.

The scrutiny checklist of an application

Deficiency emails

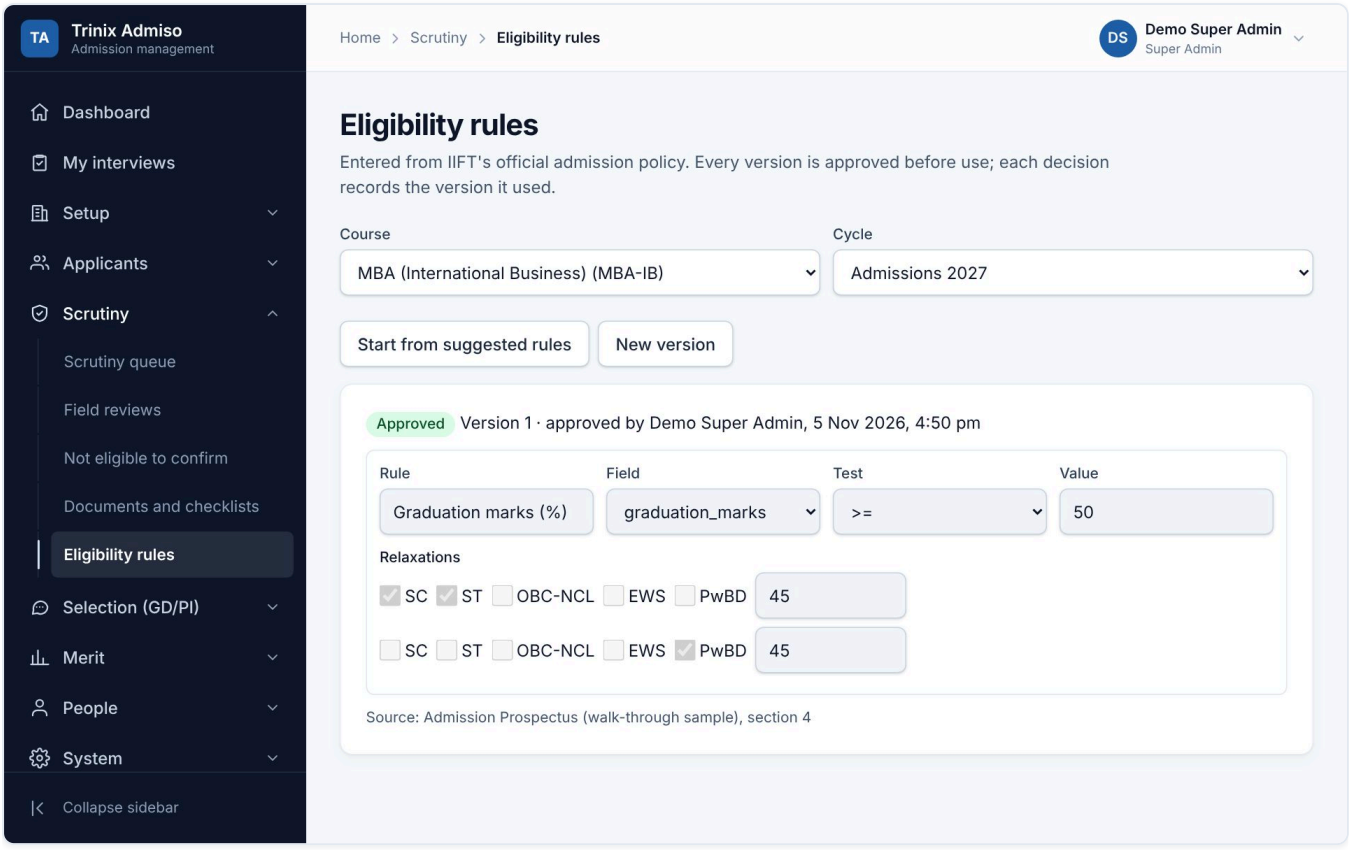

After **Mark deficient**, the system drafts an email listing what is missing, with a **reply-by date** (7 days by default, changeable). Click **Review and send**, check the text and send it. When the applicant replies, attach what they sent, and the scrutiny continues.

Field reviews

When a later import brings a different value for a field that is already verified, the change waits in **Field reviews**. Accept it or keep the old value, with a reason.

Eligibility

Eligibility rules (per course and cycle): enter IIFT's minimums, for example graduation marks of at least 50%, with **relaxations** for categories or PwBD (e.g. 45% for SC/ST/PwD). Suggested rules can be loaded as a draft. A rule set is used only after it is **approved** with a **source reference** (e.g. "Prospectus 2027, section 4").

Eligibility rules with category relaxations

On an application's **Eligibility** tab, the system shows how the applicant measures against each rule. A rule on a field not yet verified shows "incomplete". Record the decision: **Eligible**, **Provisional** (with a condition, e.g. final marks due), or **Not eligible** (with a reason).

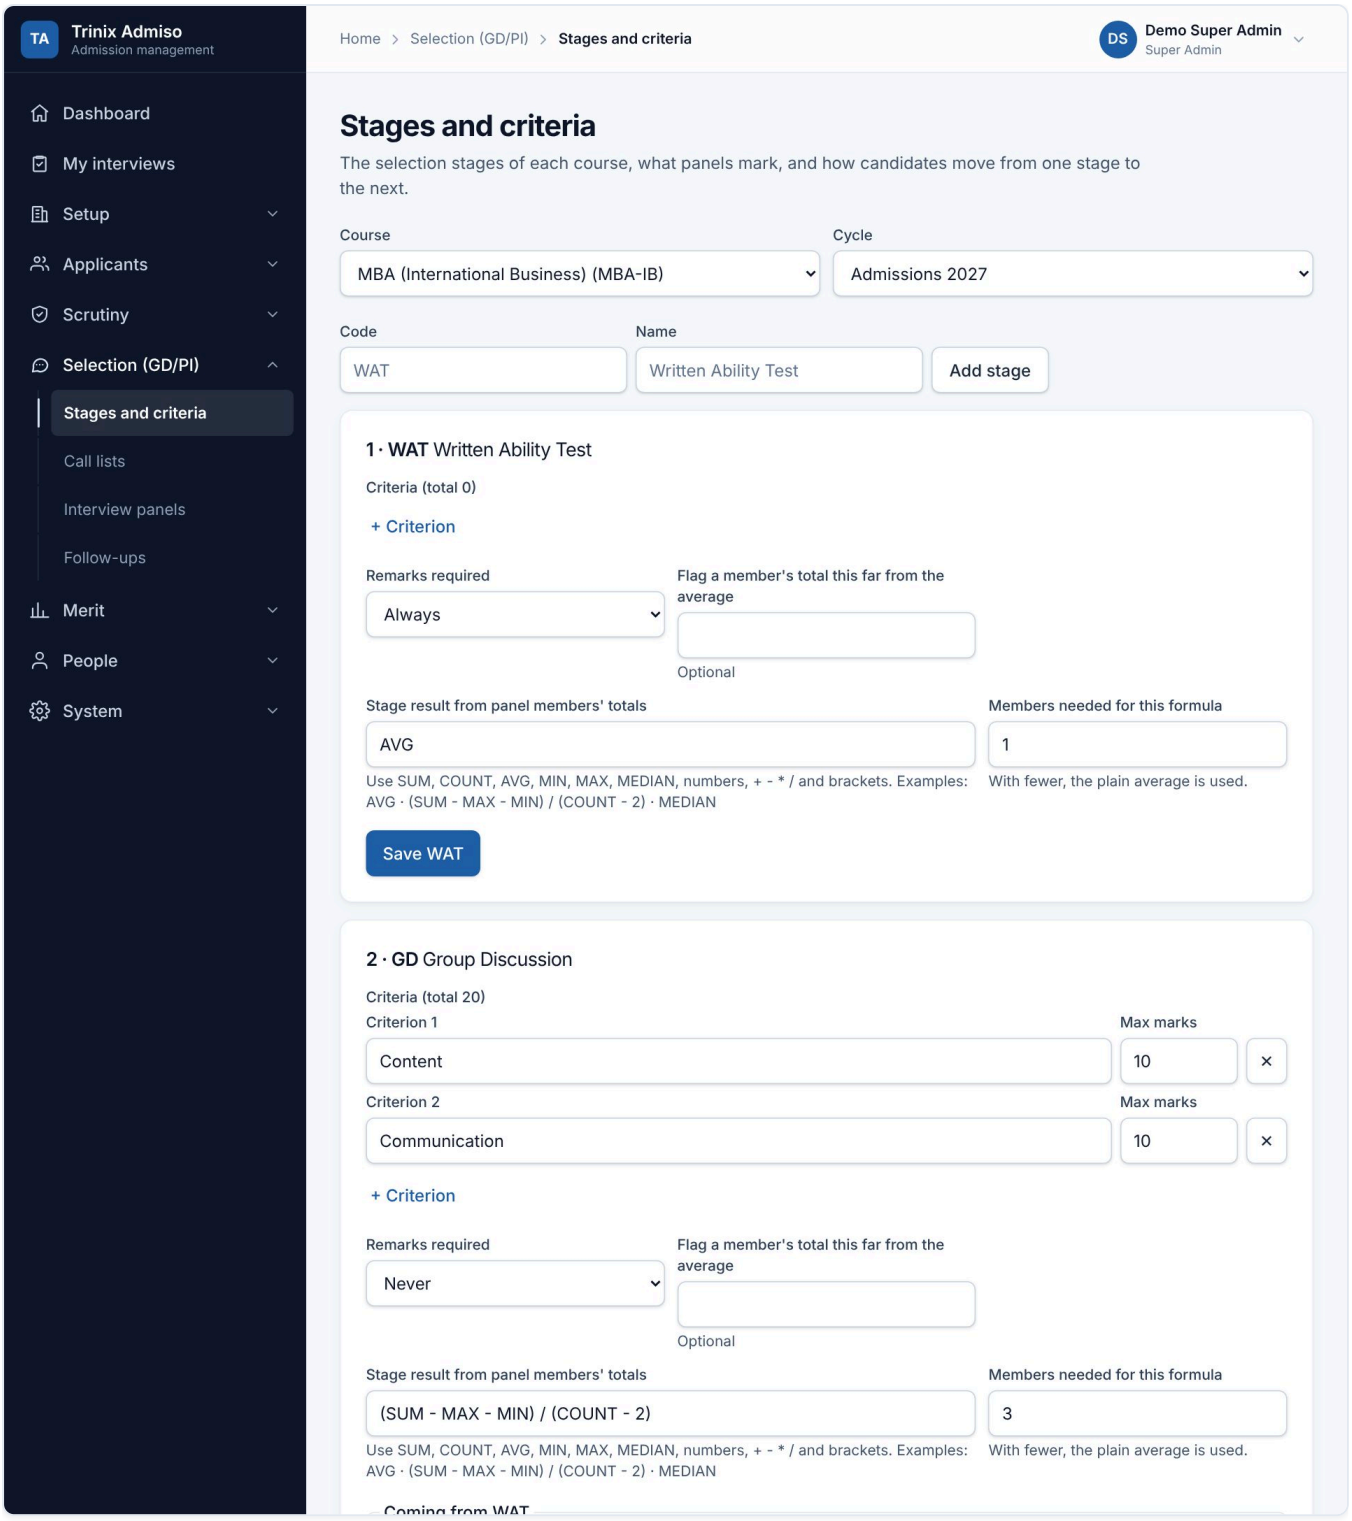

> **"Not eligible" needs a second person.** It stays pending until a Committee Chairperson or Central Admin confirms it under **Not eligible to confirm**.

Selection (GD/PI)

Stages and criteria (each cycle)

Stages and criteria (choose the course and cycle) defines the selection stages, e.g. **WAT, GD, PI** for MBA and **WAT, PI** for IPM. For each stage the admin sets:

- **Criteria and maximum marks**, e.g. Content 10 and Communication 10. These are set for every cycle; **Copy stages and criteria** brings last cycle's set in to edit. Once marks are entered, the criteria can no longer change.
- **Remarks required**: always, never, or only when the total is below a value.
- **Stage result from panel members' totals**: the formula combining the members' marks. Use `AVG` (average), `MEDIAN`, or a formula such as `(SUM - MAX - MIN) / (COUNT - 2)`, which drops the highest and lowest marks. **Members needed for this formula**: with fewer members marking, the plain average is used. The formula cannot change once any result in the stage is locked.
- **Flag a member's total this far from the average** (optional): highlights unusual marks.
- For a later stage (e.g. PI): **Panel sees marks from earlier stages**, and **Minimum GD average to be sent here** (optional).

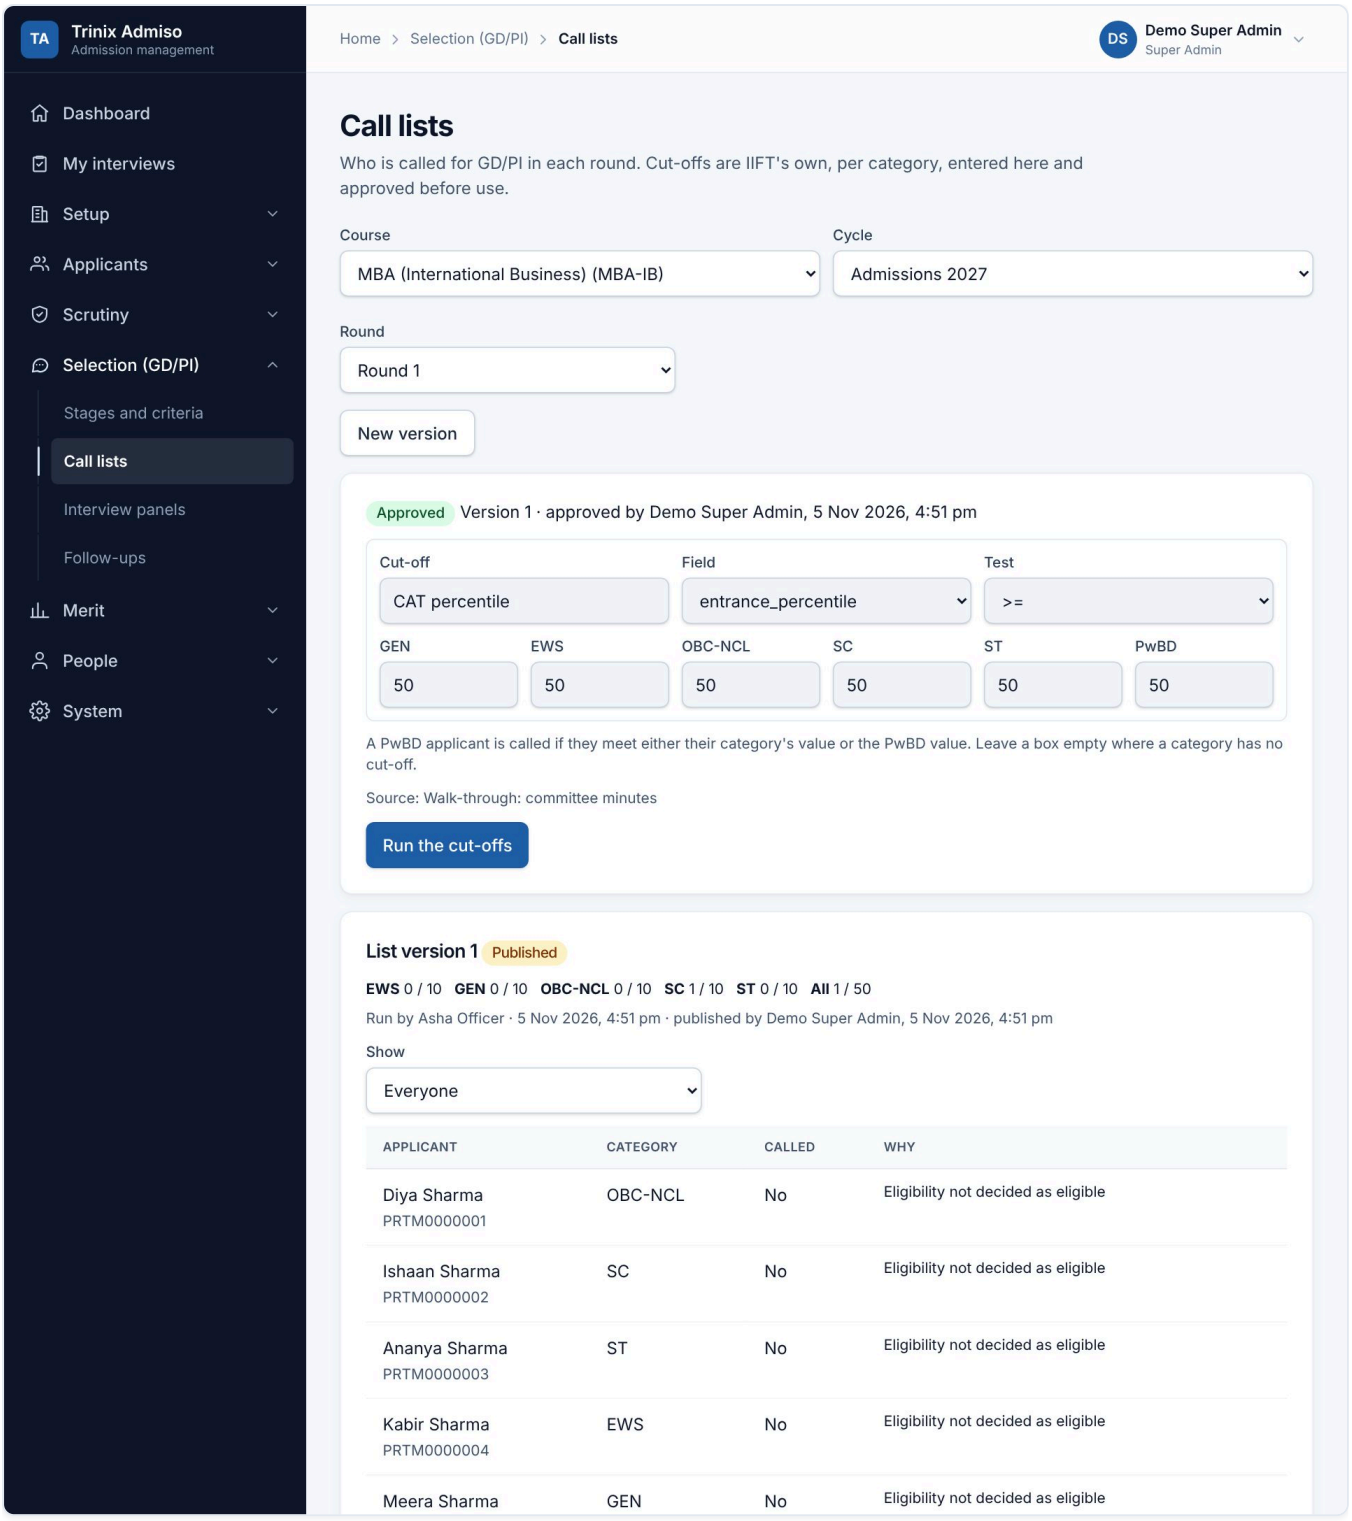

Stages, criteria and settings

Call lists: who is called for GD/PI

> IIFT shortlists before importing, so by default **every candidate imported for a round is called** (the round's setting "Candidates imported for this round are called", on the round page). A call list is then only a **cross-check**: it flags imported candidates below the cut-offs and sends no emails. Untick the setting to let the published call list decide who is called.

1. **Call lists** → choose course, cycle and round → **Enter cut-offs** (or **New version**).
2. **+ Add cut-off**: e.g. CAT percentile ≥ a value **for each category** (GEN, EWS, OBC-NCL, SC, ST, PwBD). A PwBD applicant is called if they meet either their category's value or the PwBD value.
3. Give the **source** (IIFT policy or committee decision). A Committee Chairperson or Central Admin clicks **Approve**.
4. **Run the cut-offs**: every applicant of the round is shown as called or not called, with the reason. You can change individual applicants, with a reason.
5. A **different person** clicks **Publish and email the called**. Each called applicant gets an email.

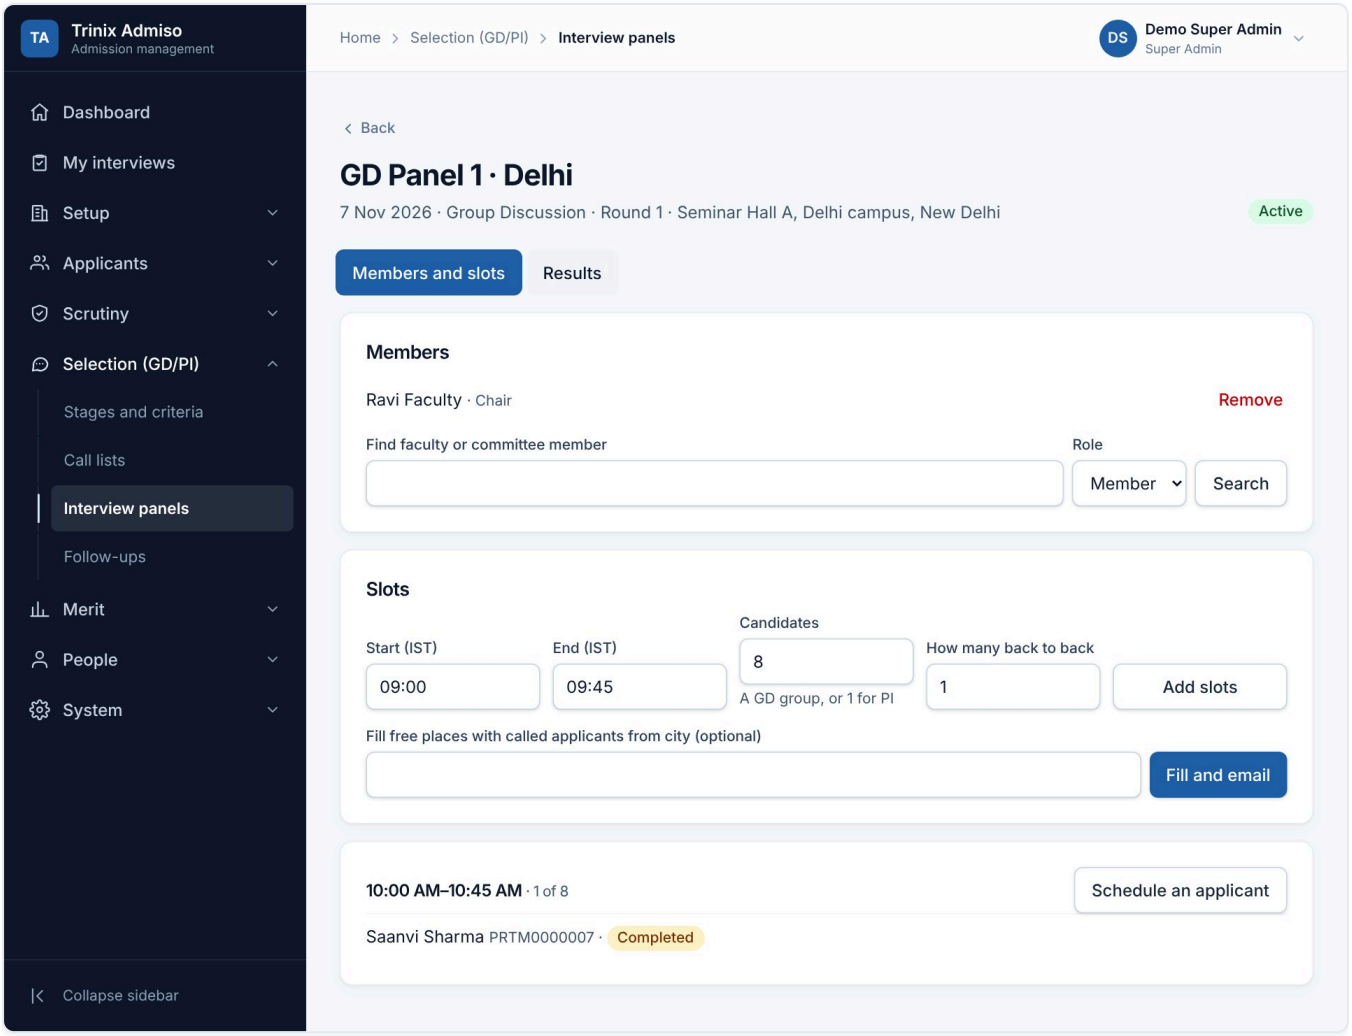

Cut-offs per category and the resulting call list

Interview panels

Interview panels → **New panel**: the stage, round, name, date, and **in person** (location and room, in any city) or **online** (meeting link). On the panel page:

- **Members**: search for faculty or committee members and add them. A chair is optional.
- **Slots**: start and end time (IST) and how many candidates. Use 8–10 for a GD group, or 1 for a PI. **How many back to back** makes a series of slots at once.

- **Schedule an applicant** books one called applicant into a slot. **Fill and email** fills the free places, optionally only with applicants from one city.

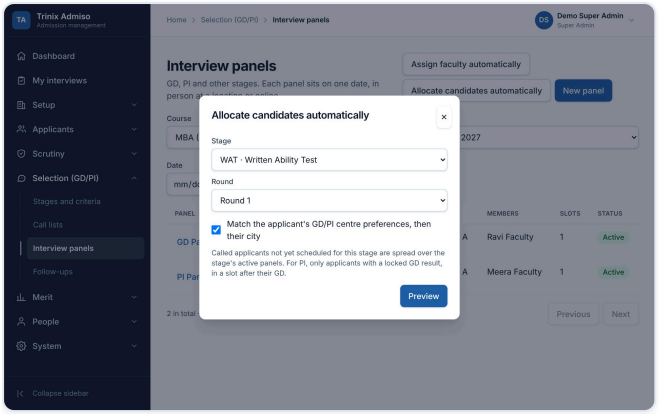

A GD panel: members, slots and candidates

Automatic allocation, with changes by hand

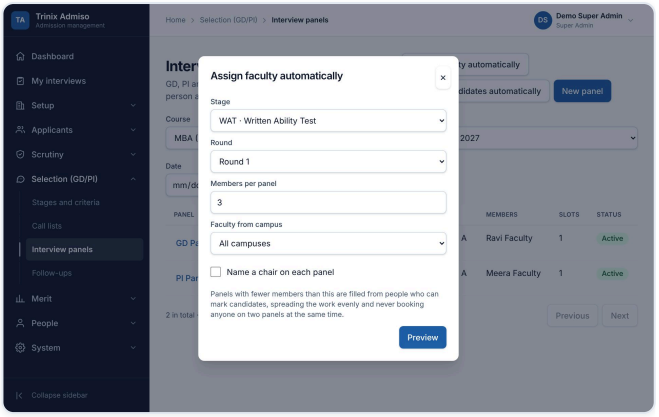

On **Interview panels**, two buttons do the allocation for a whole stage. Both show a **preview**, and nothing is saved or emailed until you confirm.

- **Allocate candidates automatically**: called applicants not yet scheduled for the stage are spread over the stage's panels. The order is the applicant's **GD/PI centre preference** 1, 2, 3, then their **city**, then any other in-person centre, then online. Everyone who can get their first choice is placed before anyone gets a second choice, and panels are filled evenly. For PI, only applicants whose GD result is locked are placed, in a slot after their GD.
- **Slot order:** in **Stages and criteria**, each stage has up to three keys (name, gender, date of birth, application number, each ascending or descending) that decide the order in which candidates fill the slots after their centre preference.
- **Different panel for PI:** if a PI panel has a member who already marked the candidate in GD, a warning names them. It does not block; move the candidate if needed.
- **Assign faculty automatically**: fills panels with the number of members you choose from the people who can mark, optionally only from one campus. Work is spread evenly and nobody is on

two panels at the same time.

Allocate candidates automatically

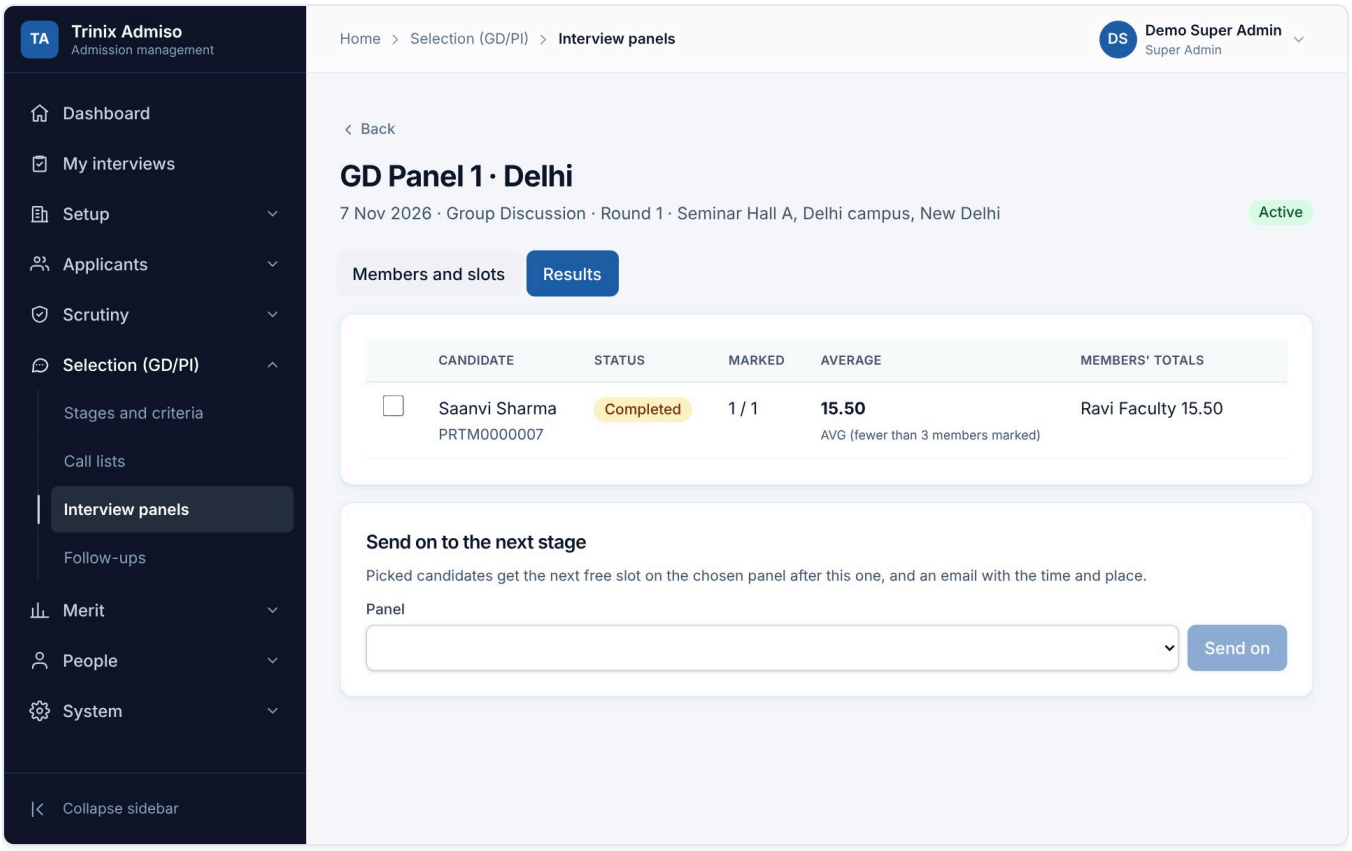

Assign faculty automatically

Changes by hand on the panel page: **Move** a candidate to another slot, **Swap** two candidates (on any panels of the same stage), or **Cancel**. Each needs a reason, and moved applicants are emailed the new time. A **reminder email** goes to every applicant the day before their interview.

> The system refuses clashes: an applicant in two overlapping slots or twice in a stage, a full slot, a member on two panels at once, or a member who has declared a **conflict of interest** with the applicant.

Results and sending candidates on to PI

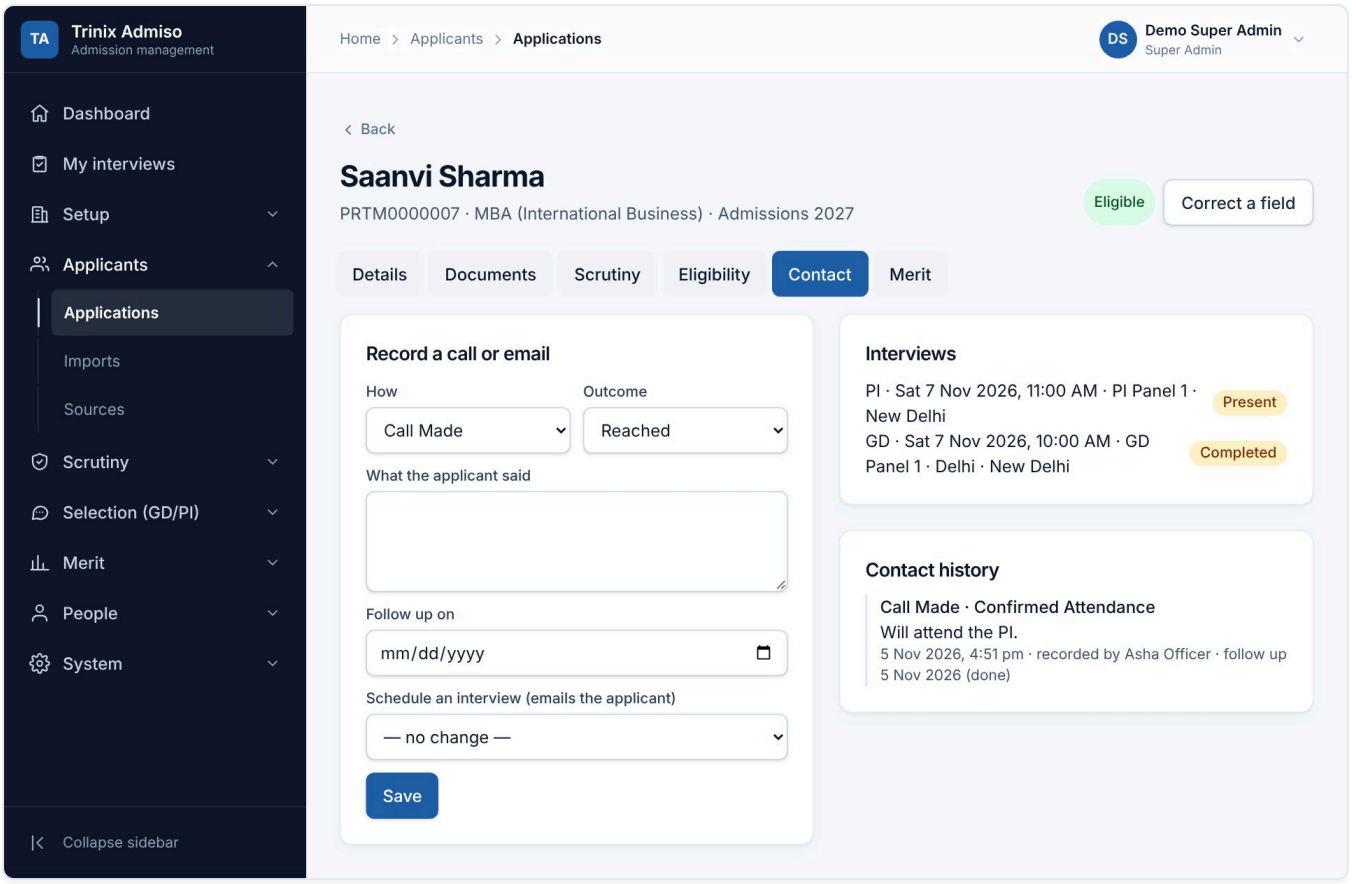

The panel's **Results** tab shows each candidate's marks from every member, the stage result and any unusual marks. When everyone has submitted, the result is **Lock**ed. Locked GD candidates can be **sent on** to a PI panel: tick them, choose the panel, and each gets the next free slot after their GD, with an email.

Panel results and sending on to PI

Applicant contact and follow-ups

The **Contact** tab of an application records every call or email: how (call made or received, email sent or received), the outcome (reached, no answer, confirmed attendance, asked to reschedule, ...), a note, and an optional **follow-up date**. From the same form you can **schedule** or **move** the interview, which emails the applicant. **Follow-ups** lists what is due today or earlier; click **Mark done** when finished.

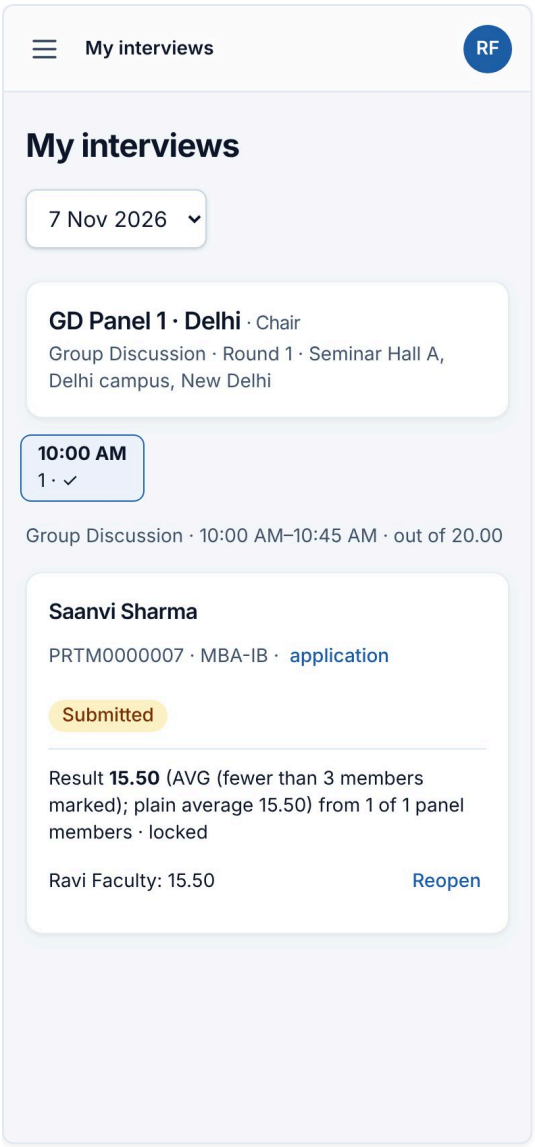

The Contact tab of an application

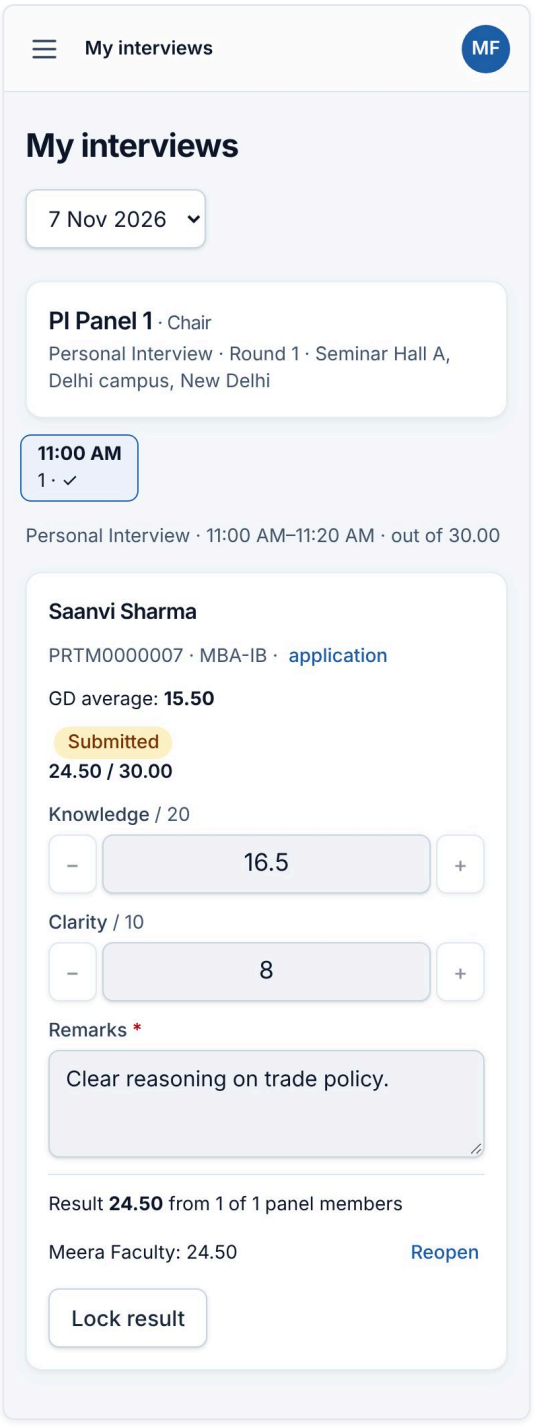

Marking interviews

Panel members mark on their own **phone or tablet** during the GD or PI. An internet connection is needed; marks are saved as you type.

1. Sign in and open **My interviews**. Choose the **date** if it is not today.
2. Your panel, venue (or meeting link) and the **time slots** are shown. Tap a slot.
3. When a candidate arrives, tap **Present** (or **Absent**). On a panel without a chair, any member can do this.
4. Enter the marks for each criterion. In a **GD** slot you see the whole group, one card per candidate. In a **PI** slot you see one candidate, with − and + buttons that change the marks in steps of 0.5. "✓ Saved" shows that your marks are stored.
5. Add **remarks** where the stage requires them.
6. Tap **Submit marks** (PI) or **Submit marks for this group** (GD). Submitted marks are locked.

A GD slot on a phone

A PI slot, showing the GD result

- You see **other members' marks only after you submit your own**.
- Made a mistake after submitting? The panel chair or a Central Admin can **reopen** your marks, with a reason; the earlier marks are kept in the history.
- If you know a candidate personally, tap **Declare a conflict of interest** before marking. You will not mark that candidate, and the office can move them.
- The **application** link opens the candidate's full application and documents, for your own candidates only. Each opening is recorded.

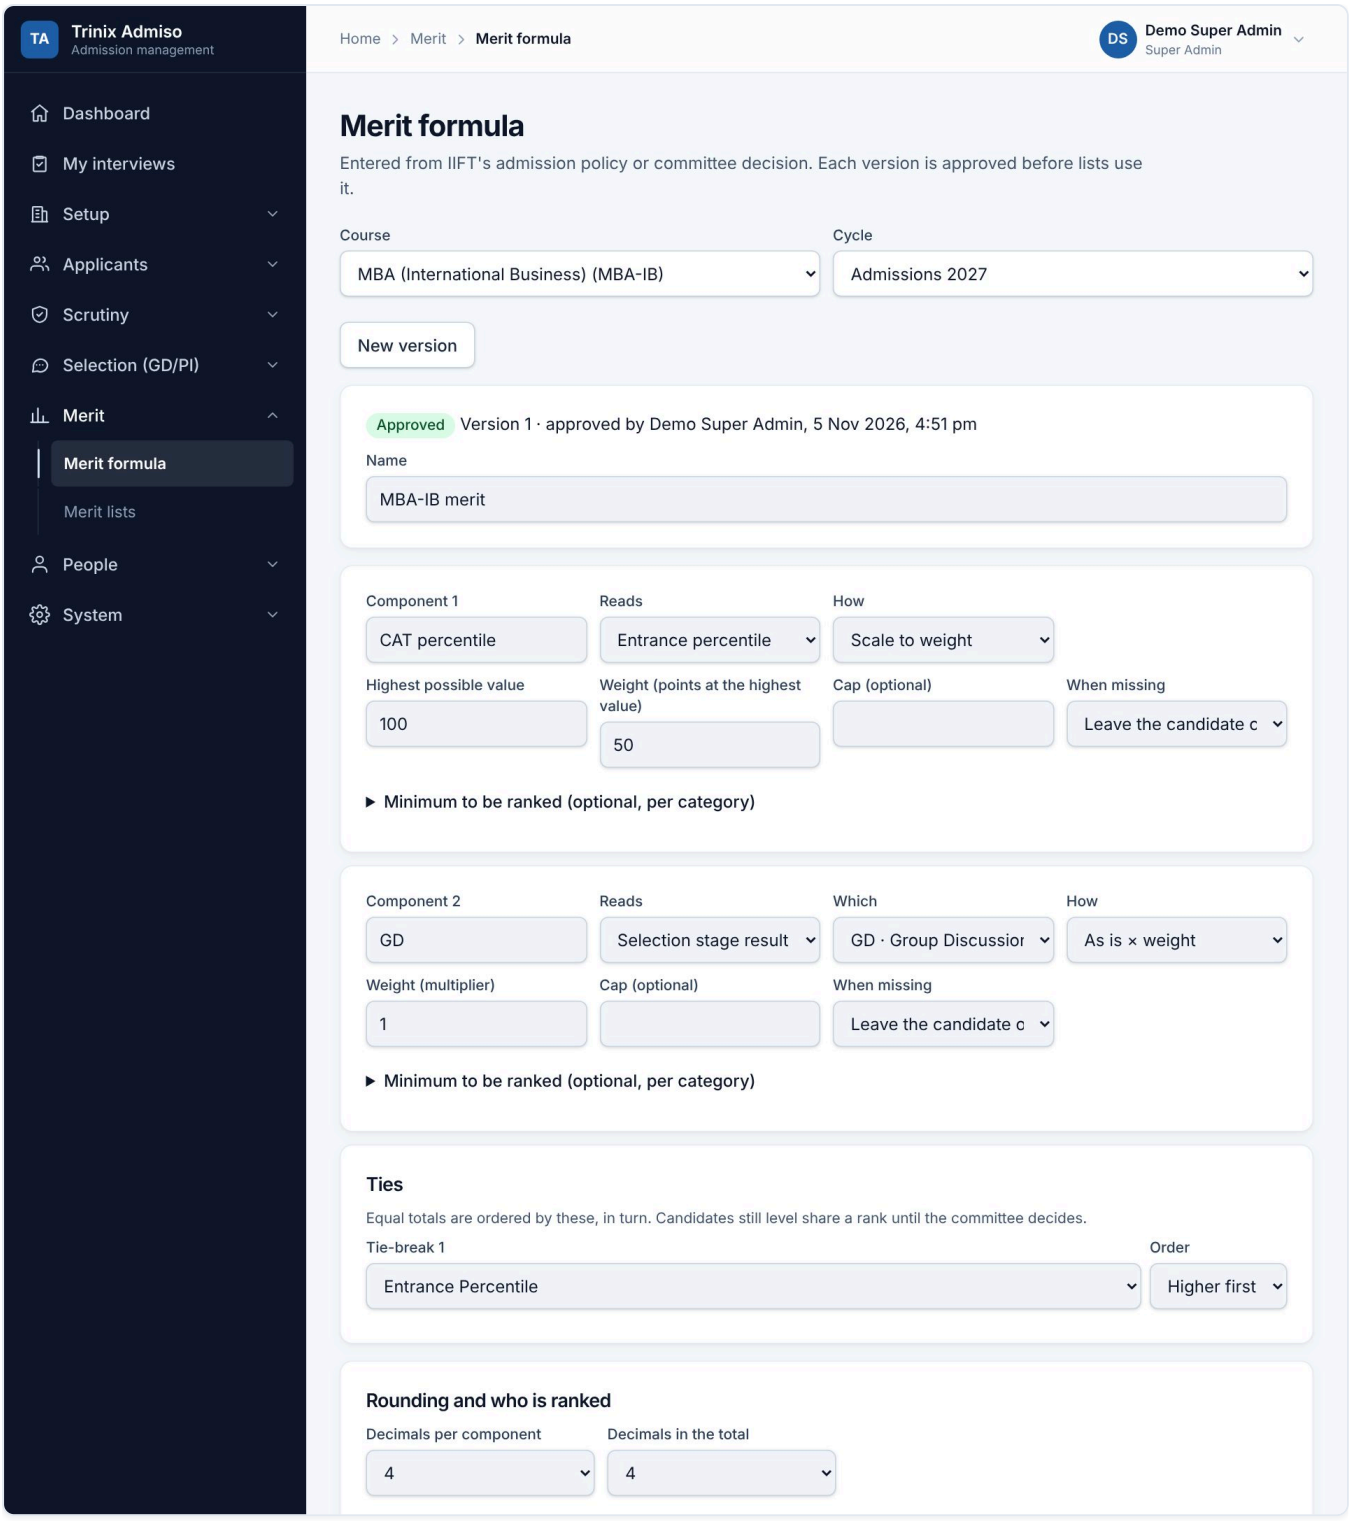

Merit

The merit formula

Merit formula (choose the course and cycle) holds IIFT's formula as a **weighted sum of components**. **Start a formula** (or **New version**), then add each component:

Setting	Meaning
Reads	The value used: entrance percentile or score, a sectional score, academic marks (%), work experience (months), a selection stage result (WAT/GD/PI), or an applicant field with a points table
How	**Scale to weight** (value ÷ highest possible value × weight), **Ranges → points** (e.g. months of experience to points), **Value → points**, or **As is × weight**
Weight, cap	Points at the highest value (or a multiplier), and an optional maximum
When missing	Leave the candidate out (with the reason), or count as zero
Minimum to be ranked	Optional, per category, e.g. a minimum PI result

Also set the **tie-break order** (e.g. higher PI result first, then higher CAT percentile, then older candidate first), the **decimals** (always rounded half up), and the **source**. **Try it on one candidate** shows the calculation for any application number before you approve. A Committee Chairperson or Central Admin clicks **Approve**.

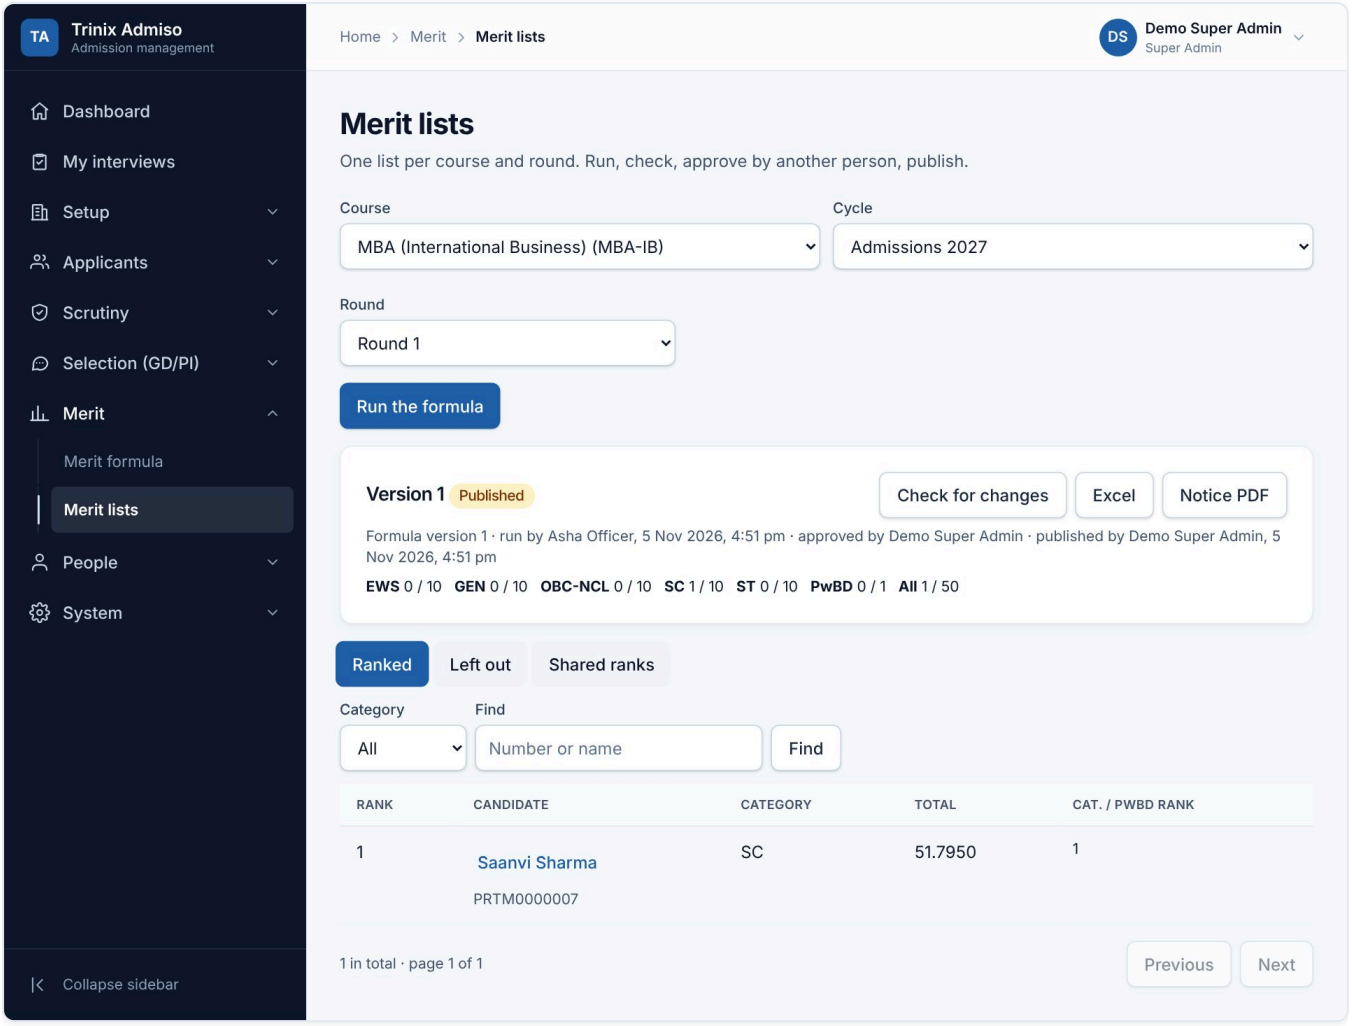

A merit formula with two components and a tie-break

> Academic marks are used as the **percentage the applicant gave**. If only a CGPA was given, the value counts as missing and the list shows "percentage not given".

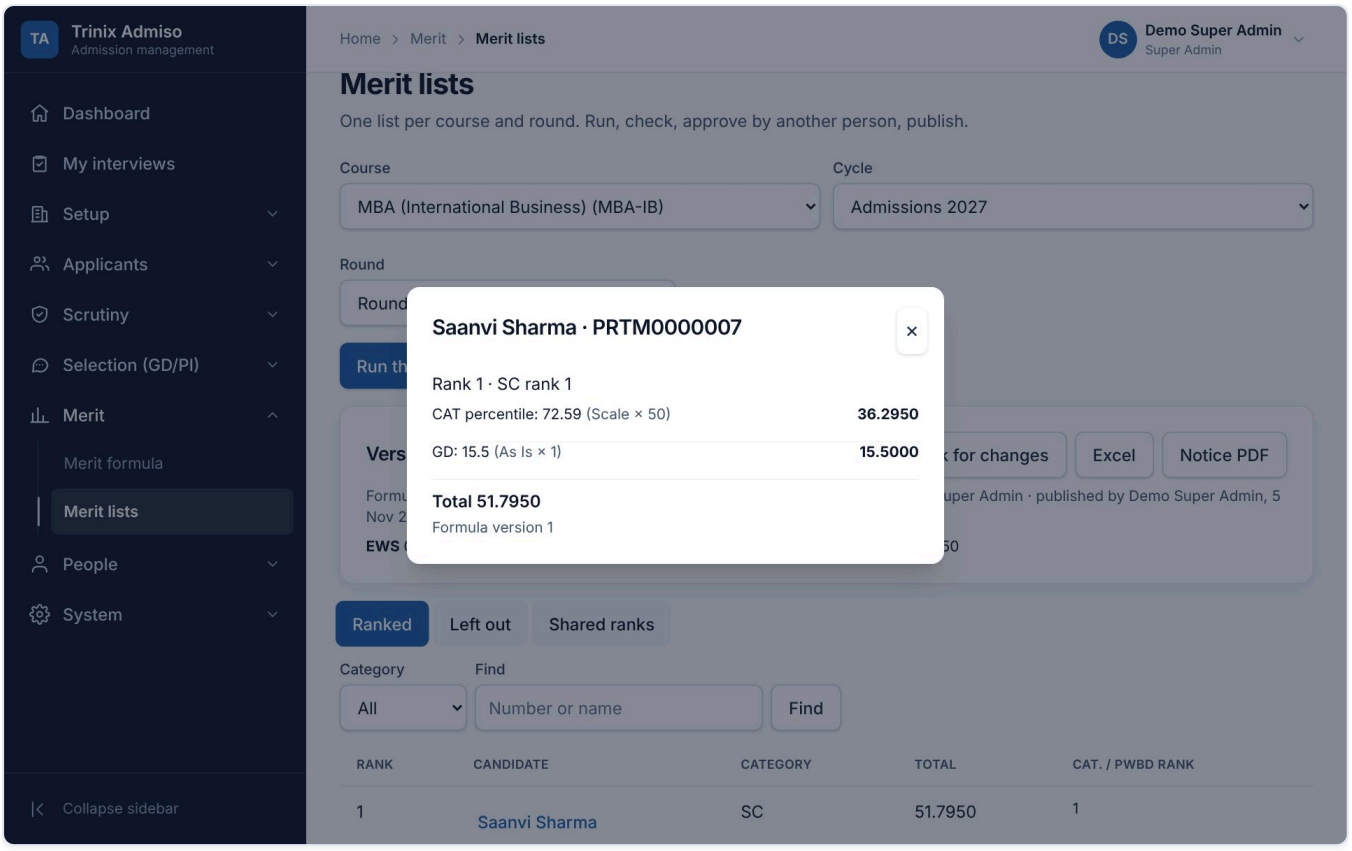

Merit lists

1. **Merit lists** → choose course, cycle and round → **Run the formula**.

2. Check the **Ranked**, **Left out** (with reasons) and **Shared ranks** tabs. Click a name for the full breakdown. Filter by category to see category ranks, or by PwBD.
3. Candidates still level after every tie-break share a rank. The committee orders them on the Shared ranks tab, with a reason.
4. A **different person** clicks **Approve**, then **Publish**. A published list is read-only.

A published merit list

One candidate's breakdown

- **Excel** exports the full breakdown for the committee. **Notice PDF** gives a notice-board list (number, name, category, total and ranks, with no contact details). Both are recorded.
- **Check for changes** compares the list with today's data and re-calculates the stored data to confirm the result. If marks are reopened or a field is corrected after publishing, the list is marked **out of date**; run a new version, and **Compare** shows what changed.

CHAPTER 10 · MENU: SEATS AND OFFERS

Seats and offers

After the merit list is published, seats are allotted **campus by campus** using merit, each candidate's **campus preferences**, the **seats** each campus has and the year's **reservation rules**. Offers go out by email. Applicants never log in: staff record every answer and payment.

> No percentage, amount or rule is built into the software. Everything below is entered by the admin from IIFT's official policy (Government of India norms) and approved by a second person.

1. Categories

Categories lists the reservation categories. **Load the suggested list** adds names only; edit them to match the policy. There are three kinds:

Kind	Meaning	Examples
Vertical	Each applicant has exactly one. One of them is the **open** (unreserved) category.	Open/General, SC, ST, OBC-NCL, EWS
Horizontal	Seats set aside **inside** each vertical category	PwBD
Supernumerary	Seats **added on top** of the intake	Kashmiri Migrants, Foreign Nationals, NRI

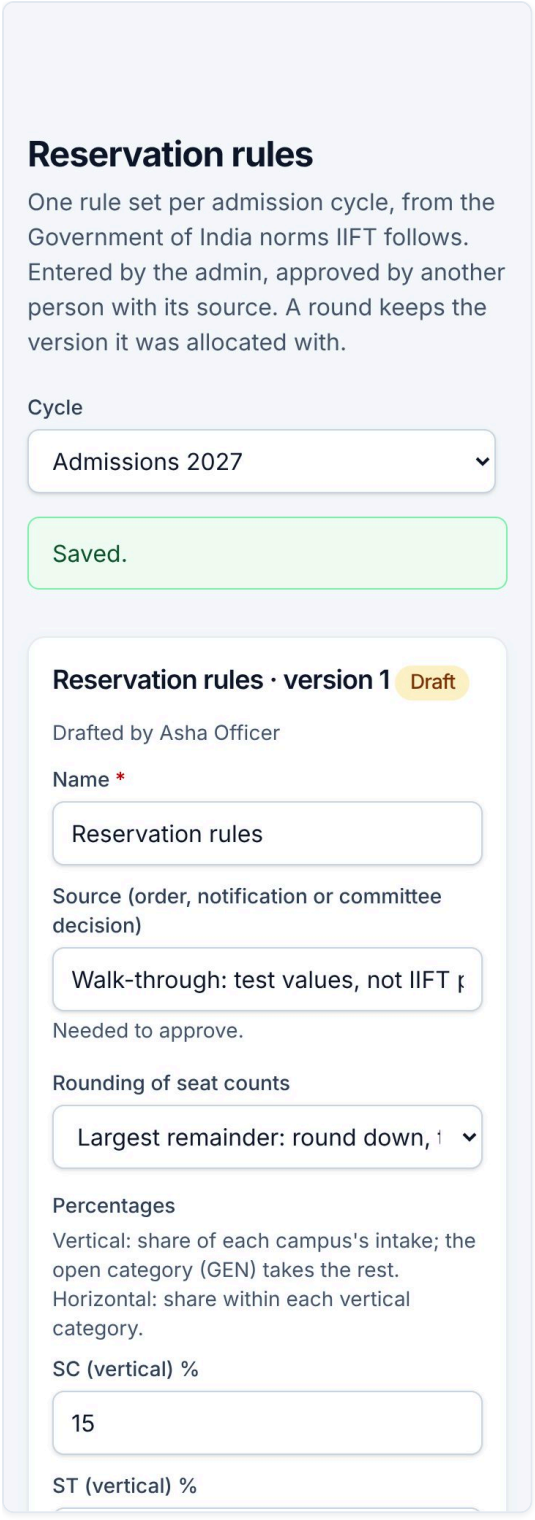

The portal file's **Category** column must use these codes. Horizontal and supernumerary categories come in an **Additional categories** column (e.g. `KM; NRI`). **Staff cannot change an applicant's category**; a corrected value comes only from a new import, through update review.

2. Reservation rules (every year)

Reservation rules → choose the cycle → **Start the rule set** (or copy last year's). Enter:

- each reserved vertical category's **percentage of the intake** (the open category takes the rest);
- each horizontal category's **percentage within each vertical category**;
- the **rounding** of seat counts (largest remainder, half up, down or up);
- the **conversion of unfilled seats**, in order (e.g. OBC-NCL → Open, SC-PwBD → SC), optionally only from a given round;
- the **source** (government order, notification or committee decision).

A Committee Chairperson or Central Admin clicks **Approve** (never the person who drafted it). An approved rule set is read-only; a change is a new version.

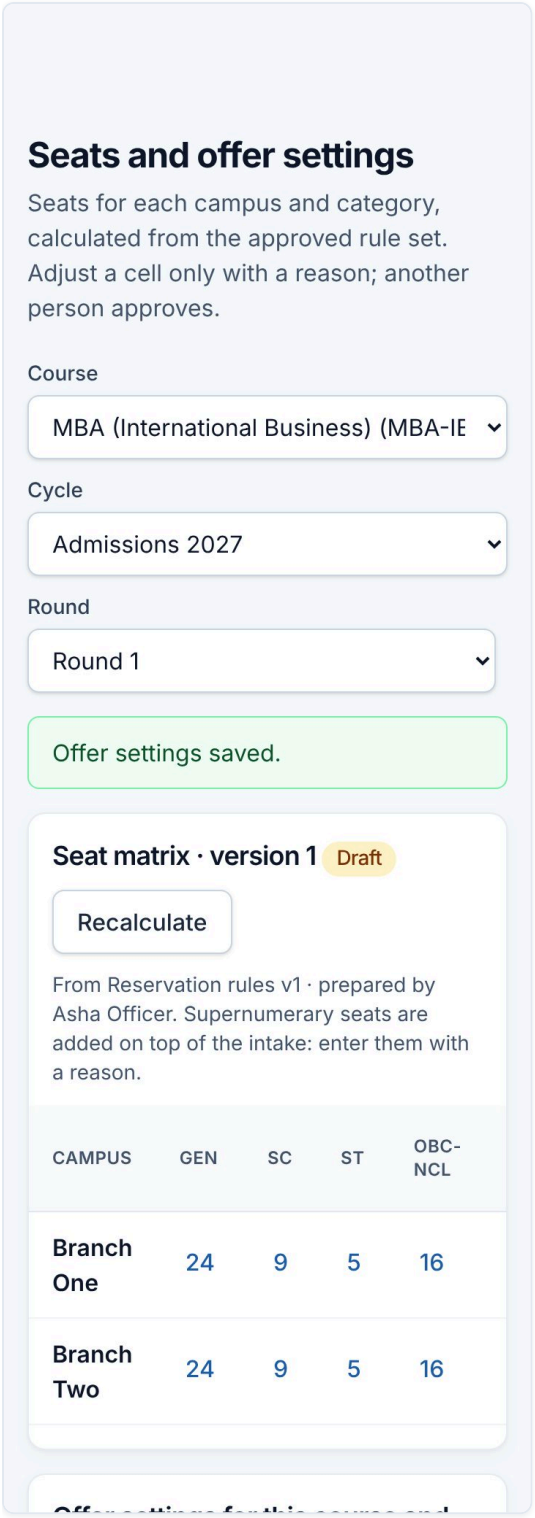

A draft rule set (test values)

3. Seats and offer settings

Seats and offer settings → course, cycle and round → **Calculate seats**. The table shows the seats for every campus and category. Click a number to adjust it, with a reason (for example, to enter supernumerary seats). Another person approves the matrix.

Below the table, set the **offer settings** for the course and cycle: days to reply and pay, the reminder days (e.g. 3 and 1 days before), the **amount to accept an offer**, the **waitlist hold amount** and days to

pay it, and the **waitlist size** for each category (e.g. 2 means twice the category's seats).

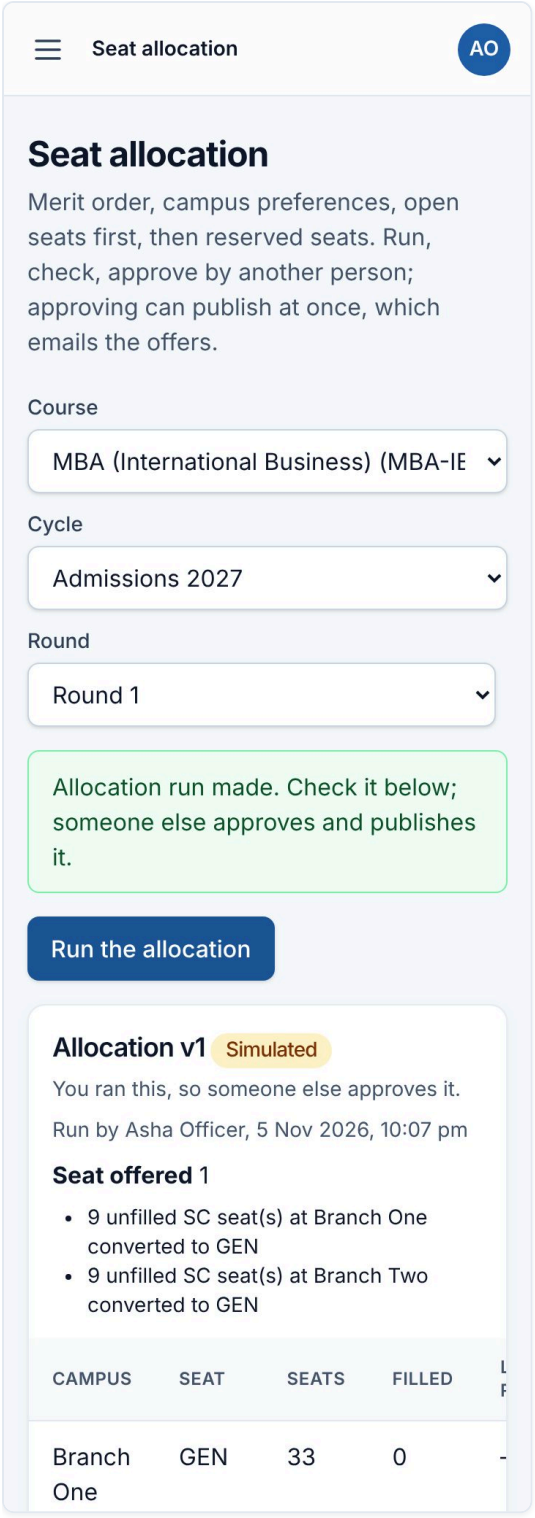

The seat matrix and offer settings

4. Seat allocation

1. **Seat allocation** → **Run the allocation**. It needs the published merit list and the approved seat matrix.
2. Candidates are taken in **merit order**. Each goes through their campus preferences in order and, at each campus, tries an **open seat** first (everyone competes for open seats on merit), then a

seat of their own category, then horizontal and supernumerary seats. Everyone gets the most preferred campus where a seat is free.

3. Seats still unfilled are converted by the rule set and the run repeats until nothing changes. The log lists every conversion.
4. Everyone not placed is **waitlisted** in merit order, up to the waitlist size of their category; the rest are "not offered".
5. Check the table of seats, filled seats and the last rank for each campus and category, and search any candidate to see **why**.
6. A **different person** clicks **Approve and publish**. Offers and waitlist emails go out at once.

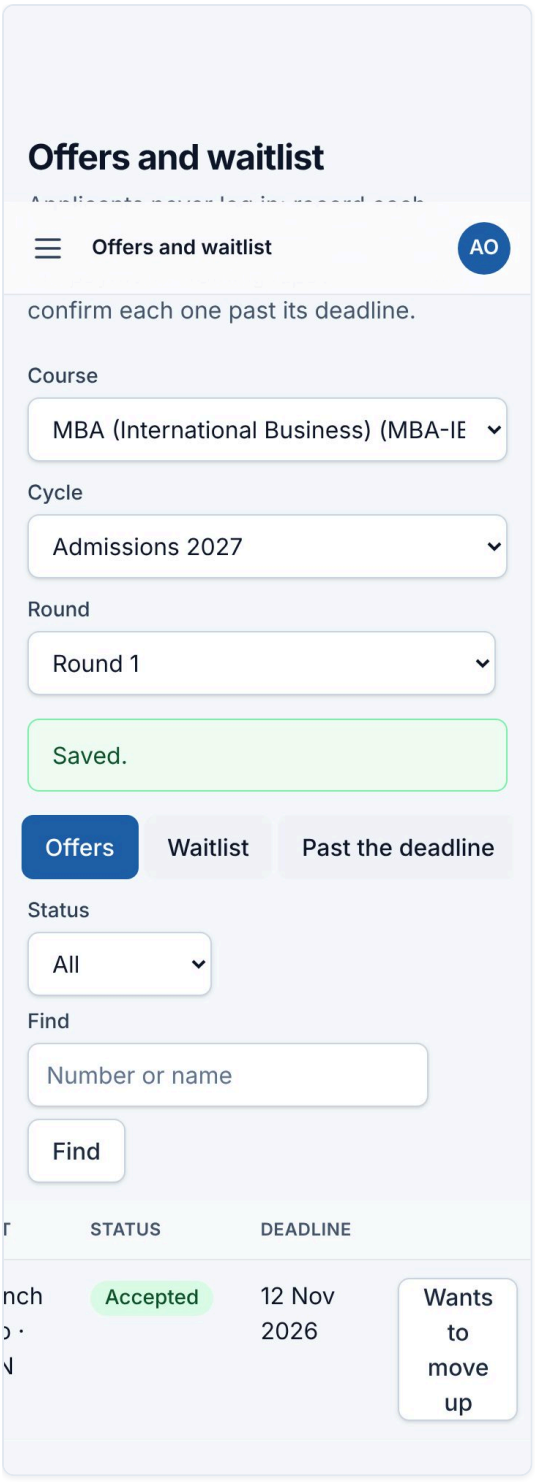

An allocation run before approval

> If two candidates share a merit rank and only one of them would get a seat, the run stops: resolve the tie in the merit list first.

5. Offers, payments and the waitlist

Offers and waitlist has three tabs: **Offers**, **Waitlist** and **Past the deadline**.

- **Record answer**: accepts or declines, by phone or email (for email, attach the applicant's reply). An acceptance needs the **payment**: amount, mode, reference (UTR or DD number), date and the receipt.
- **Moving up:** tick "Wants to move up" when the candidate prefers a campus they ranked higher. They **keep their seat**; if a seat frees up at the preferred campus they get a move-up offer, and the old seat is released only when they accept it.
- **Waitlist hold:** waitlisted candidates are emailed (without a position number) the amount to pay to keep their place. **Record hold payment** marks the place as held. Only held places are considered when seats free up.
- **Nothing lapses on its own.** The **Past the deadline** tab lists offers without an answer or payment, and unpaid waitlist places. Confirm each one with **Confirm lapse**.
- **Freed seats** (declines, confirmed lapses, withdrawals, moves) start a **vacancy run** automatically. It waits on the Seat allocation page for a second person to approve and publish.
- Reminder emails go out automatically on the reminder days, at most once a day.

An offer accepted by phone, with its payment

6. Payments (Accounts)

Payments lists payments waiting for a check. Accounts compares each with the bank statement and clicks **Verify** or **Reject** with a reason. You cannot verify a payment you recorded. A rejected payment flags the offer so staff record a new payment. **Payments are never edited or deleted.**

The application's **Offer** tab shows every offer, answer, payment and who recorded each.

Admission and accounts

After an offer is accepted and paid, the candidate is admitted, owes the fees of their campus, pays them in instalments, and may withdraw and get a refund. No payment gateway is used: money moves by bank transfer or DD, and the system records it. **Every entry is checked by a second person, and nothing is edited or deleted**: mistakes are corrected with returns, reversals and adjustments.

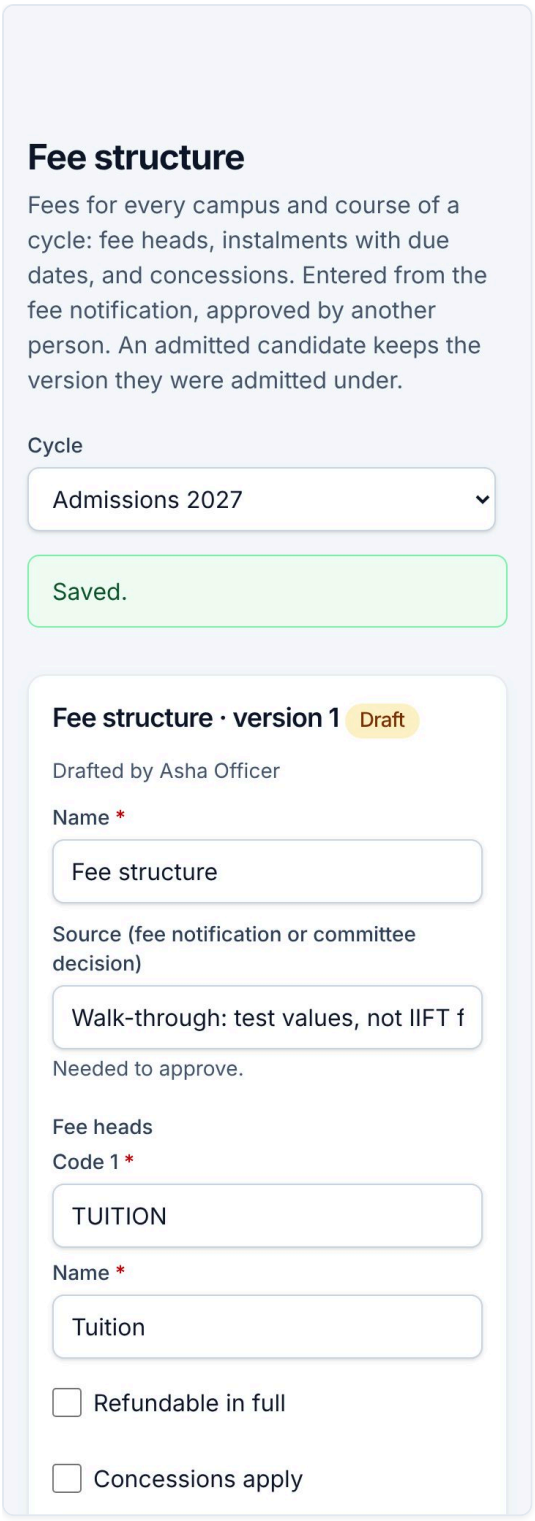

> Fee amounts, concessions, refund slabs and the admission number format are entered by the admin from IIFT's notifications. None of them is built into the software.

1. Fee structure (every cycle)

Fee structure → choose the cycle → **Start the fee structure** (or copy last year's). Enter:

- **Fee heads**, e.g. tuition, hostel and boarding, a security deposit. Tick "Refundable in full" for a deposit, and "Concessions apply" where a concession can apply.
- **Instalments** with due dates.
- The **amount** of each head in each instalment, for every campus and course.
- **Concessions**, e.g. "SC, ST, PwBD: 50% of tuition". If two apply, the larger is used.
- The **source** (fee notification).

Another person clicks **Approve**. An admitted candidate keeps the version they were admitted under.

Drafting a fee structure (test values)

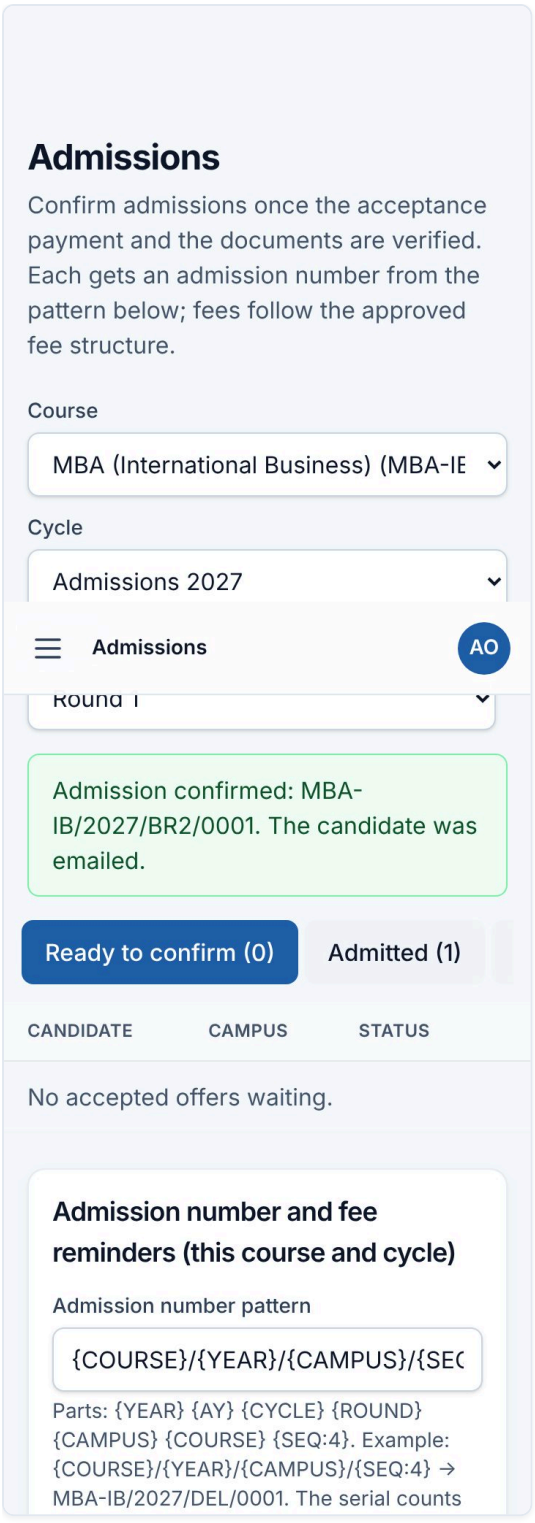

2. Refund policy (every cycle)

Refund policy → **Load the suggested UGC slabs**. The draft has slabs counted from the campus's **last date of admission**: full refund less a processing fee 15 or more days before, then 90%, 80%, 50%, and nothing more than 30 days after. **Check every slab against the current UGC order**, add the source, and have another person approve it. Enter each campus's last date of admission on the **round page**.

3. Confirming admissions

Admissions → course, cycle and round. First set the **admission number pattern** at the bottom, from the parts `{YEAR}`, `{AY}`, `{CYCLE}`, `{ROUND}`, `{CAMPUS}`, `{COURSE}` and a serial `{SEQ:4}` (e.g. `{COURSE}/{YEAR}/{CAMPUS}/{SEQ:4}` → MBA-IB/2027/DEL/0001), and the fee reminder days.

1. The **Ready to confirm** tab lists accepted offers and anything still in the way: an unverified acceptance payment, documents not verified, a move-up offer waiting, or no approved fee structure.
2. When nothing is in the way, the Admission Officer clicks **Confirm admission**. Optionally add **conditions** with deadlines, e.g. "degree proof by 31 October".
3. The candidate gets the admission number by email. Their dues are worked out from the fee structure and concessions. The acceptance amount, and a waitlist hold if any, count towards the fees.

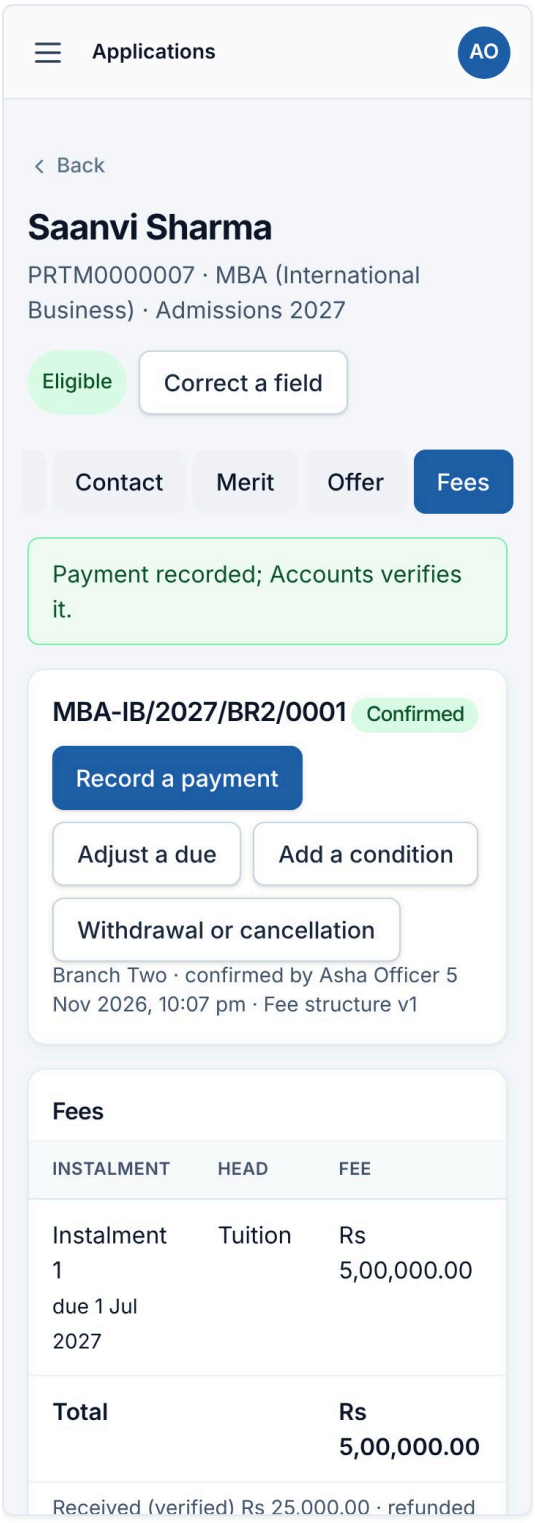

An admission confirmed, with its number

The **Conditions overdue** tab lists conditions past their deadline. Nothing is cancelled on its own: mark the condition met or waived (with a reason), or record a cancellation.

4. Fees tab and payments

The application's **Fees** tab shows the dues for each instalment and head, concessions, adjustments, what is paid and the balance. Only **verified** payments count.

- **Record a payment**: amount, mode, reference (UTR, DD or challan), date, payer and the receipt. It goes to the oldest dues first.
- Accounts, on **Payments**, clicks **Verify** (the candidate is emailed a PDF receipt), **Return** for correction (staff then record a corrected entry), or **Reject** with a reason.
- **Reverse** a verified payment that later fails, e.g. a bounced DD. Another person approves the reversal.
- **Adjust a due**, e.g. a waiver approved by the committee, with a reason and its source. Another person approves it.
- Reminder emails go out on the reminder days before each due date.

The Fees tab after a payment is recorded

5. Withdrawal and refunds

1. On the Fees tab, **Withdrawal or cancellation**: the date received, how (for an email, attach it), and the reason.
2. Another person confirms it on the Admissions page (**Withdrawals to confirm**). The admission ends, the seat is freed (a vacancy run is prepared for approval), and a **refund request** is prepared.

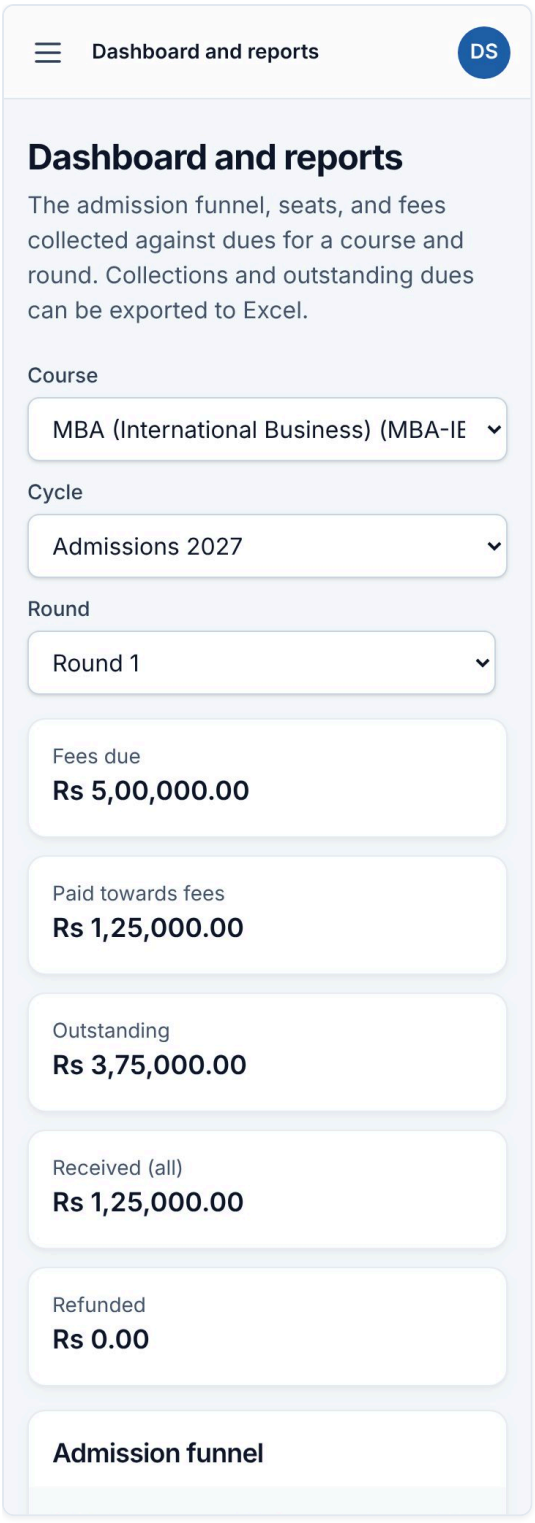

3. **Refunds** shows the calculation line by line:
   - fully refundable heads;
   - the slab percentage of the other fees paid;
   - the processing fee;
   - any excess paid;
   - refunds already made.

   Add deductions if any, with reasons. Another person approves, returns or rejects it. An approved amount can never exceed what is refundable.
4. The money is paid outside the system. Record each refund payment (partial payments are allowed); another person verifies each. The request becomes "refunded" when the approved amount is paid.

Waitlist holds of candidates who never got a seat appear under "Waitlist holds to refund" and are refunded in full. A refund never brings back an offer or seat.

6. Bank statements, dashboard and reports

- **Bank statements**: upload the bank's statement (CSV or Excel). Credits are matched to recorded payments by reference and amount. Unmatched lines and payments are listed for you to match by hand.
- **Dashboard and reports**:
  - the admission funnel by category (imported, called, interviewed, ranked, offered, accepted, waitlisted, admitted, withdrawn);
  - seats by campus;
  - fees due against received;
  - collections by date and outstanding dues, with Excel exports.

Dashboard: money and the admission funnel

System administration

Installation (first time)

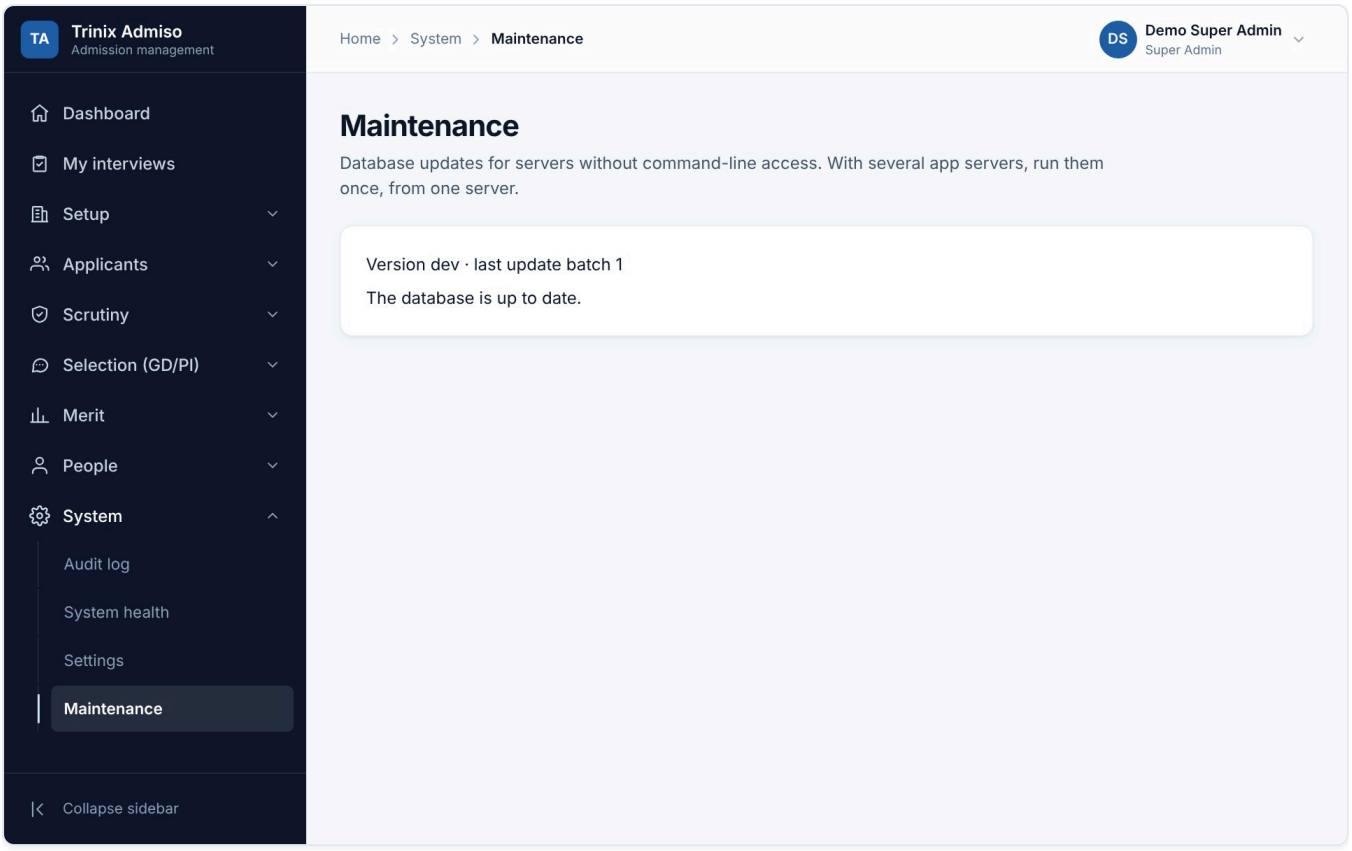

Upload the release package to the server so that the web address points at its `public` folder, then open `https://<your site>/install`. The wizard:

1. checks the server (PHP 8.3 and its extensions, writable folders; Redis and ClamAV can be added later);
2. connects to the database (MySQL 8);
3. sets the site address, time zone (Asia/Kolkata) and email server, with a **test email**;
4. sets file storage, Redis and virus scanning;
5. saves the settings, creates the tables, and creates the **first Super Admin**.

The wizard closes for good once the first Super Admin exists. The last page shows the **cron job** to add, which runs every minute. It sends reminders and, on servers without Redis, also processes imports and emails, so these do not move without it. Full steps for shared hosting are in the deployment guide that comes with the system.

Updates

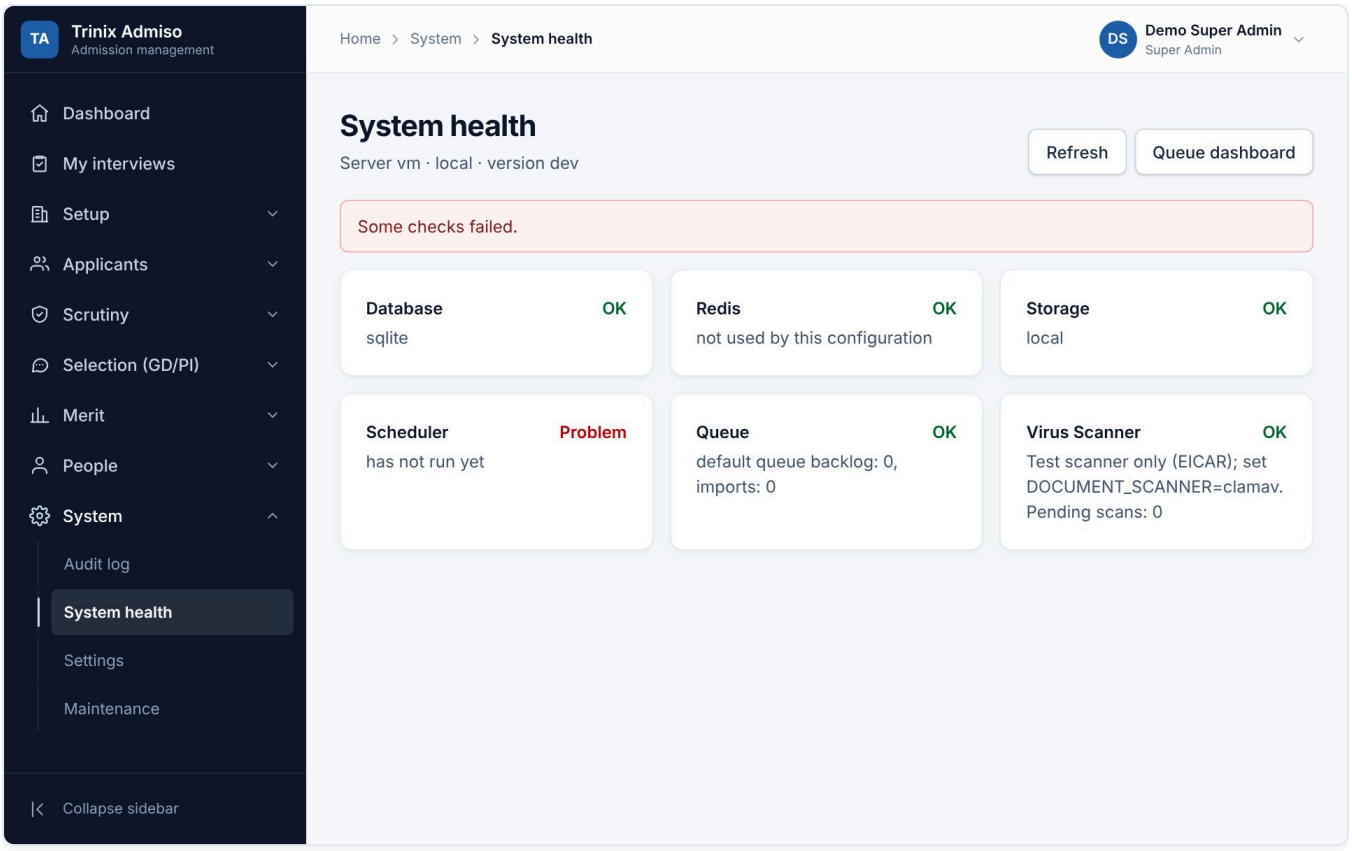

Upload the new release over the old one, keeping the `.env` file and the `storage` folder. Then an IT Administrator opens **System** → **Maintenance**. If database updates are pending they are listed: **take a backup first**, type **MIGRATE** and your password, and click **Apply updates**.

Maintenance: pending database updates

Health, settings, audit

- **System health**: database, Redis, storage, the virus scanner, the scheduler (cron) and the queues. A warning here needs IT attention.
- **Settings**: for example the session timeout, sign-in lock rules, invitation expiry, support email, deficiency reply days, and allowed document-link websites. Technical settings belong to the IT Administrator.
- **Audit log**: every change, with who, when, the old and new values and the reason. Filter by date, person, action or record.

System health

Personal data. Applicant data is covered by the DPDP Act 2023. Give accounts only to people who need them, keep the site on HTTPS, use real virus scanning (ClamAV) before real documents are uploaded, and keep backups off the server.

CHAPTER 13

Roles at a glance

Each role can be limited to a campus, course and/or cycle. The exact permissions are under **People** → **Roles and permissions**.

Role	2FA	Typical work
Super Admin	Yes	Everything: setup, users, roles, sources, settings, audit
IT Administrator	Yes	System health, technical settings, Maintenance (database updates), unlocking accounts. No applicant data
Central Admission Administrator	Yes	Cycles, rounds, approving imports, documents, scrutiny, eligibility, call lists, stages, panels, marks, merit, reservation, allocation and payments (all approvals)
Branch Administrator	Yes	Their campus: users and teams, applications, documents, scrutiny, contact, panels, viewing merit, offers at their campus
Committee Chairperson	No	Confirming "not eligible", approving call lists and merit formulas, approving and publishing merit lists, reservation rules, seat matrices and allocations, viewing and reopening marks, marking
Committee Member	No	Marking candidates on their panels
Admission Cell Officer	No	Imports, applications, documents, scrutiny, eligibility, call lists, panels, contact, merit formulas and lists, reservation rules, seats and allocation runs (running, not approving), offers and payments
Admission Cell Staff	No	Documents, applicant contact, scheduling interviews, recording offer answers and payments
Faculty / Panel Member	No	My interviews: marking own candidates
Reporting Officer	No	Viewing approved information such as merit lists
Accounts Officer / Staff	Officer: Yes	Staff record payments and refund payments; the Officer verifies, returns or rejects them, approves reversals, adjustments and refunds

> The person who uploads an import, runs a call list or runs a merit list can never approve or publish the same item. This applies even to Super Admins.

CHAPTER 14

Questions and troubleshooting

Question	Answer
I cannot see a menu item or a page says "Not found".	Your role or scope does not include it. Pages outside your campus, course or cycle show "Not found". Ask your administrator.
My import stays "Queued" or emails do not arrive.	The every-minute cron job is not running. IT: check System health → Scheduler.
Why can I not approve this import?	You uploaded it. Another person with approval rights must approve it.
An import shows "Updates" for an applicant.	The applicant was imported before and the file has different values. Check them in the preview; verified fields go to Field reviews instead of changing.
I cannot enter marks for a candidate.	The candidate is not marked Present yet, your marks are already submitted (ask the chair to reopen), or you declared a conflict of interest.
The stage formula cannot be changed.	Results in that stage are already locked. The formula must be set before results are locked.
A merit list says "out of date".	Data changed after publishing (e.g. marks reopened). Run the formula again for a new version and compare.
Can a round start before the academic year?	Yes. Admission rounds for 2027-28 can start in December 2026. They must end by the end of the academic year.
Does an applicant ever sign in?	No. Applicants are contacted by email and phone; staff record their replies on the Contact tab.
I lost my phone with the authenticator app.	Sign in with one of your recovery codes, then set up two-factor again under Account. Without codes, ask the IT Administrator.

Terms used

Term	Meaning
Branch / campus	One of the institute's campuses (Delhi, Kolkata, Kakinada, GIFT City)
Offering	A course at a campus in a cycle, with its seats (intake)
Cycle	One admission year's process, e.g. Admissions 2027 for the 2027-28 academic year

Round	A stage of admissions with its own shortlisted applicants and dates (Round 1, Round 2, ...)
Source	Where applicant data comes from, normally the admission portal
Batch	One import (a file or an API push), checked and approved as a whole
Scrutiny	Checking documents and details against the course's checklist
Call list	Who is called for the selection process (GD/PI) in a round
Stage result	A candidate's combined GD/PI/WAT result from all panel members, by the stage's formula
Merit list	Candidates ranked by the approved merit formula, per course and round
PwBD	Persons with benchmark disabilities
2FA	Two-factor sign-in: password plus a code from an authenticator app
